THE RECENTLY RELEASED BBC MICRO  
VERSION HAS BEEN ORIENTED WITH  
ACCLAIM AND INCREDIBILITY—

At last, speech synthesis at a price you can afford. SPEECH!! works entirely in software taking up less than 9K of RAM: no extra hardware whatsoever is required. Unlike other systems, SPEECH!! has an unlimited vocabulary! It will say anything you want it to, and is simplicity itself to use. Simply type in: **"SAY I AM A TALKING COMPUTER, AS EASY TO USE AS 1,2,3..."** and the computer speaks.

SPEECH!! has a built-in parser which translates English words into "phonemes", or speech particles. There are 49 phonemes and 8 different pitch settings which can be used directly by the "SPEAK" command (eg. "SPEAK(HIGHLOW4)" so stress or intonation can easily be added wherever desired. You can change the overall pitch with the "PITCH" command.

Every copy of SPEECH!! comes complete with extra software:  
**DEMO** — shows off all the features.  
**SPELL** — an innovative educational program.  
**SAYFILE** — speaks the lines of your programs.

Applications in:

- games
- education
- business
- utilities

**SUPERIOR  
SOFTWARE  
Limited**

24 HOUR TELEPHONE  
ANSWERING SERVICE FOR ORDERS

**OUR GUARANTEE**

- All mail orders are despatched within 24 hours by first-class post.
- Postage and packing is free.
- Faulty cassettes and discs will be replaced immediately.

**REVIEWS ON BBC-1 AND BBC-2 TV**

**Saturday Superstore (BBC-1)**

"This is knockout! This is great! ... Wonderful! Very very clever!" Fred Harris

**Micro Live (BBC-2)**

"Really good value!" John Coll

**REVIEWS IN THE COMPUTER PRESS**

"The reproduction is surprisingly good, and certainly on a par with some of the more expensive speech interfaces I have heard. An excellent low cost speech synthesiser that really is very good value for money". ACORN USER

"... incredibly easy to use. The end result is as good as anything I've heard this side of the Amiga". POPULAR COMPUTING WEEKLY

"Overall an excellent package". MICRONET 800

"This is one utility which cannot be beaten on quality or price". THE MICRO USER

"SPEECH!! from Superior Software is a truly remarkable offering. A rare gem indeed. Superior Software has produced a price breakthrough by achieving an apparent technical impossibility". A & S COMPUTING

## A Hotshots fan writes

I have just read my new Commodore User and a certain Daniel Proctor's letter 'How dare he say such things! For one, Hotshots is one of the best things in Commodore User! (Well done, Mike) Another thing is that Ken McMahon is right most of the time I played Death Wish, I should know. Over the last few months

Commodore User has changed for the better. So stick it Daniel! By the way, what's my prize for saying these nice things about you?

Steven Moody,  
Malden, Eire  
A T-shirt?

## Hard up

I was a proud owner of a Vic 20 until Commodore took it off the market.

I was planning on getting a C128, so I saved up for one (which took a very long time). Finally I had the money and guess what? My parents wouldn't let me buy one and I know I won't get one for Christmas because I never get much.

I do envy people who write in to you about their games or their C16's, Plus/4's, C128's and C64's because I hear that they have great computers and I have only got a puny Vic 20. Even though I have a Vic 20, I still get CU because I think it is a very good read. Your Mag is full of news, reviews, etc. It's fab! I used to get every single magazine for Commodores until I ran low on money and I had to choose one and I chose you.

Anyway, why bring a computer out on the market when you are going to take them all later on even if they do sell a lot?

I too think CU based games are

too expensive e.g. £9.95 for a game on tape (expensive) and an extra fiver for the same game on disk, software houses must think kids have got money on tap but who am I too complacent? I haven't even got a good computer to play them on.

Chi Chi,  
Shrewsbury, Newcastle upon Tyne  
This letter brought tears to our eyes, Chiu. Tell your parents we say the 128 is a good buy, and have a T-shirt.

## All at sea

In the June issue of Commodore User, you reviewed a game by Electronic Dreams called R.M.S. Titanic. A good idea but why can't they get their facts right. It wasn't 'R.M.S. Titanic' it was 'S.S. Titanic'.

Knowing a little bit about the 15th April, 1912, I was shocked to see one of the world's most famous ships have its name changed.

So please ask this little software house, how could they do such a thing!  
William Turner,  
Dagenham, Essex  
Sorry William, but we've checked it and it was the Royal Mail Ship Titanic.

## Prog moan

I am the proud owner of a C64. I am disgusted in the way that your programs (Hunchback and Music Keyboard) will not enter in, in these programs there are lines that cover more than two lines when typed in. When I press return 'syntax error' shows up. When I list the program the lines do not show up. Please could you tell me how to overcome this problem? I have tried to split the lines up into different lines but it does not work. If you could, I would like you to redo the

lines and show them in your next edition or send them to me to the address above.

Hunchback was in your April edition, and I wrote a letter to you about it but I received no reply. Music Keyboard was in your June edition. I await your reply with eagerness.  
Scott Wilson,  
Ratcliffe, Kent.

There is nothing wrong with these games. Have you used Easy Enter? Have you typed them in correctly — the same goes for anyone else!

## Facelift

I was really impressed by your new look for the June edition, as it makes it look more modern and up-to-date. Another great idea was the Screen Scene index in the contents page, which I found really useful.

I have now stopped buying Computer and Video Games and have combined to buy CU because your games reviews are in colour, well-presented and most of them take up a page each at least, and all the new games are shown, before they are brought out onto the market e.g. Ghosts & Goblins and Popeye etc. I was also impressed by your letters page which had to be expanded, as it is one of the most interesting features.

One of the reasons I prefer it is because a larger percentage of the pages are in colour, unlike some mags, I can mention. Also, how do most mail order software shops manage to sell well known games for £7.50 include P&P? Anyway, I think Elite are doing fantastically, with a great arcade version. Games such as BambiJack, Popeye and

Ghosts & Goblins

Keep up the new look and features

James Marshall,

Twickenham, Middlesex

Sorry about that C+VG

## What a Bummer

Could you tell me what is wrong with Commando from Elite? It goes weird for me, which would probably be liked by Yak Finter, but not by myself.

After seeing the jive on the screen, I hopped on a 42 bus which took me to town, I hopped on into the local shop where I bartered 16 pence for the game, whereupon I was verbally attacked by the security guard. I returned the attack, but physically. The guard will probably not do it again.

After grooving on up the escalator I approached the computer centre. After waiting for what seemed aeons, I was able to talk to the assistant. He replaced the copy. I lunked on home and booted the tape. No change. Groove on back, see the guard's new neck collar and jive on upstairs. I told the assistant that the game may have been a pirate copy, as there was no holo-gram sticker on it. In an older Elite advertisement for Kokotoni Wilf, Elite stated that there would be one of these

stickers on the cassette. Anyway, the manager replaces the copy after a lecture. Booged on home. I wasn't freaked out when the game came up. Still bogus man, still bogus.

I didn't bother to replace it. Also, I DO enjoy bike shed humour, and I do NOT care if Sam

Letters, Commodore User, Priory Court  
30-32 Farringdon Lane, London EC1R 3AU.

Fox exploits her body. Everyone exploits something — catch my drift?

I do not care if someone calls me a boodicker (get that Daniel Proctor) so I declare that your magazine is *très* ben.

Catch this Mark Storey — no other magazine criticizes the Plus4 as no other magazine bothers with it.

I hope all is well in your part of the universe and that Linda Thomas is enjoying herself down at Greenham Common with the rest of the Women's Libbers Groove on out.

Paul Kierny,  
Moldside, Co. Dublin  
Like larout Paw we dig what you're saying, man, we think. Anyone seen the hippy convoy?

Zzap, Andy Braybrook, Archer Maclean, Electrosound Rob Hubbard, Game Killer and Multi-colour sprites.

NOT — Software Projects, Domark, US Gold's loading music, Melbourne House, Martin Gallstone, one-colour sprites, Kambo Ocean (where's the "Supertest", "Knight-Rider", "Streethawk" etc?) and Elite (the game not the company).

But none of these are as good as Rob Hubbard. He's the best. Rick Jones, Dover, Kent. International Karate was not original enough to get a Screen Star, sorry — wait and see if Fist II gets one!

## Pale point

Referring to Jamie Phillips' letter under the heading of Pole Axed. About two months ago I bought Yie Ar Kung Fu and I was very disappointed because in about 2 weeks I had mastered the game, in fact I got so good at it I beat the Kung-Fu master, Blues roughly 140 times and clocked the score nearly five times.

I could have gone on but my hand and eyes started hurting and I got very boring — even my little brother, aged 10, got onto Blues.

Jamie Phillips says Pole is extremely hard but if you use the following moves you should have no trouble getting past Pole.

Don't move, just duck. When he comes up to you do a leg sweep, you might only get one in but don't move towards him. Keep on doing this and he'll go down.

Richard Weeder,  
Winmore Hill, London

## Elite write

I am a proud owner of a Commodore 16 and I congratulate you on the great support of this machine.

I was browsing through one of your magazines and I noticed that

you mostly give colour photographs for the 64 and black and white for the 16 Plus4 in your Screen Scene section.

The 64 and 16 may be different computers but could you even have a Screen Star 16 and Cheapo of the Month for the 16 and Plus4?

I'm sure that many 16 and Plus4 owners would agree

Andrew Wilcox,  
11 Charles Road, Pembroke, Dyfed  
Andrew Wilcox: Come on Elite, you don't get colour reviews for Frank Bruno that way!

In fact although we are limited for colour we don't rule out its use on C16 games if they deserve it. The same goes for Screen Stars.

## C16 points

I think your magazine is ace but I have one or two criticisms. Firstly, how about having some adventure reviews in the "Into the Valley" spot for the Commodore 64? Every month I eagerly turn to the page for some 16 reviews, but alas I find none.

Secondly, why not have a page where readers can write in asking for help with adventures? I am sure this would be gratefully received.

Thirdly, make reviews for Commodore 16 games longer! For instance in the June issue I counted 14 pages for the 64/128. For the C16 2 pages of reviews!

Josiah Hoo,  
Chertsey, Farnborough.  
Well Jason we're putting more in and I think you'll find the rest of your requests catered for already.

## Dearos schmearos

Firstly, I would just like to say that I really enjoy reading your excellent magazine. Now I come to the rude bit.

I am grinding my teeth in fury,

Our letters bag is bulging with your comments, criticisms, queries and praise currently so we've expanded our letters page. Every letter printed gets a coveted Commodore User T-shirt, but we've added an extra incentive — the chance of winning a chart-topping game for the star letter of the month. So get your pen and paper out and write in to

Letters, Commodore User, Priory Court,  
30-32 Farringdon Lane, London EC1R 3AU.

## Cool it

I buy CU each month, and think it's the best Commodore mag going. I do enjoy reading Zzap 64 too, but not as much as CU. I bet you'll rip this letter up and vomit all over it now, just coz I mentioned Zzap 64. What I'm saying is both CU and Zzap are very good, so why are you rivals? I would have thought that such good and such popular mags would have gone well together.

Also, why didn't International Karate get a Screen Star? It's not "just another karate game", it's really quite special. The men look the same as in Fist, but so what? It's much smoother, faster, more playable and 100% enjoyable. By the way, did you know that International Karate has three speeds? You did? Then I won't bother telling you that holding down "S", "A", "X" and "I" at the same time makes it really, fast, and "S", "A", "X" and "4" makes it really slow. I really enjoy it returns it to normal. Also, holding down "S", "X" and "E" (that's an anagram!) will make the men complain a lot! I wonder why?

I like your new reviewing system. It's a vast improvement on the old one. Computer Magic was also very good, but Play To Win II is brilliantly brilliant. But how about some pokes too? This would make it even better.

Finally, mainly in reply to James Foster in June 1986 issue, here's what I think is Hot on the 64 — HOT — Epyx, Jelf Minter, CU,

## Cheapos Scheapos

I'm sick of criticism, criticism, and more criticism. Is that all the big software companies deserve? Just because some people like cheap games.

I think most US Gold and other big company software is worth every penny, allowing for a few exceptions.

Take Microprose's, Kennedy Approach. Utterly fantastic, worth every single penny (£14.95). It may take a few weeks saving up but it's worth it. I know many other people who would rather save up for a fantastic game, rather than a few of the pathetic boring games from Mastertronc.

Are people scared to stick up for the big software companies, or am I their only true follower?

P.S. your April review of Superbow was excellent (I am a fanbase of L.A. Rams). Well done Mike Pastenden.  
Roy Summers,  
Hayle, Cornwall

# You're looking to do more with your computer...

## Programmer's Basic Tool Kit

**FEATURES**—Fast Graphics: Sprite Animation, Text Windows, and Background Scrolling at Assembly Language Speed. **Graphic Sprite and Pont Editors:** Move, Copy, Paste and Paint Fonts and Sprites. **Drawing Tools:** Circle, Box, Line, Fill, Scaling, Copying and Clipping. **Complete Sound Kit:** Volume, Play, Tone, Wave **Applications Utilities:** Printer Commands and Graphics Tablet Drivers for Commodore 64 and 128. **Program Editor:** Find, Replace, Undo, Renumber Plus Error-Handling. Built-in Vorpall Fast Loader. Fully Documented Users' Manual.

**£19.95**

Available for the Commodore 64/128

## Vorpall Utility Kit

1541 Head Alignment program that could save you a trip to the repair shop. File recovery routine that finds and recovers files you may have erased by mistake. Super-fast Format, File Back-up and Disc Back-up utilities that let you format and back-up in seconds instead of minutes.

**£14.95**

Vorpall Save/Load utilities to let you load programs you've written up to 25 times faster than normal. Works with the Fast Load Cartridge™ from Epyx

Available for the Commodore 64/128

## Fast Load Cartridge

With all this new power and uses for your Commodore you don't want to waste time waiting for your programs to load. That's why we developed the Fast Load™ cartridge. Fast Load transforms your 1541 disk drive from a lumbering hippo to a leaping gazelle. Some programs load up to ten times faster with the Fast Load Cartridge!

**£24.95**

Available for the Commodore 64

If you want to do more with your computer—make it powerful, make it work, and make it fast—look for the new Epyx software at your local computer retailer.

## User club

● I am starting a user club for owners of the C16 and Plus/4 computers and I would be very grateful if you could print my name and address so that any potential members can get in touch with me. For too long C16 and Plus/4 users have been treated as third class citizens and I hope to try and change this by offering some kind of support for these underrated machines.

The club will have its own magazine and will encourage interaction with its members.

Anyone interested in such a club should send a SAE for further details.  
David Barter,  
Almondbank, 42 Mount Stewart St,  
Canke, Lanarkshire, Scotland  
ML6 5EB

## War Player

● I am writing to ask you how long the Commodore User reviewers spend on each game. After reading your review of War Play I think it must be about ten minutes maximum.

Mike Patenden makes several valid points about the game but also leaves the impression that he played it for a very short time.

He describes one of the enemy as 'some kind of robot-like animal'. Surely he can see that this 'animal' is in fact two men, one carrying a rocket launcher. He also states that he found it impossible to hit any of the installations.

If he had played this game for any length of time he would have found it very easy to hit the targets. If Mike had bothered to spend some time flying the bomber he would have discovered that the lower the altitude the easier it is to hit the targets. He would also have realised that if the altitude is low enough then the bomb hits the ground before the bomber scrolls away. The 'buzzing object' that runs the

plane is obviously a missile. Did Mike play this game blindfold? (I wish I had — MP). That is the only way he could not have hit a target. The review is based on short playing time and lack of understanding of the game, and perhaps if more time was spent on playing it, it would receive a better treatment.  
Graham Barter,  
Edinburgh.

The graphics were lousy and so was the game. Fact.

## A plea for help

● I think that your magazine is brilliant. I was looking for a magazine for the 64 that had a lot of features. I like the reviews on the top games and some of the lesser known software, some of which are not always up to your standards.

I also like the short program listings and Tommy's Tips. Although most of the tips seem to be for the C16. From what I've read there does not seem to be a regular 'Games-solving page'. I think a lot of Commodore Users would like this as they could write up to ask for help for particular nail biting and frustrating games — most adventure games.

I hope you will welcome this idea with a degree of thought and I think a lot of people would like to see it in later issues. Again I must say I think Commodore User is great. Good luck with future editions!  
Doreen Heppel,  
Hilbrook, Ipswich.  
I think you'll find all these requests incorporated in this issue, David.

## Zzit squeezed

● As I was browsing through the new look CU (June 85), I noticed in your BZZZ section that

you had a list of the things that were in and out. You said that adventure games were out yet you gave 4 pages to this type of game. I thought your magazine was supposed to include everything you thought was in.

In your list of programmers you should put Rob Hubbard and Martin Galway out (nothing personal). Mr Galway is just your music is all the same and I don't like it.

In your list of magazines you should have put Zzap as the out magazine. As Minter himself once said 'It is written by 12 year old luddies for 12 year old luddies'.

Looking forward to the next issue and glad to see you are making the Play to Win supplement a regular addition to your magazine.  
Cain Houlton,  
Blackrock, Co Dublin.  
That's why Jeff's always appearing in Zzap, then. Actually Gary Penn was thirteen in July.

## What's a computer?

● What nonsense some people talk about their computers. 'I use it for all manner of important applications', they grandly proclaim. 'Like adding up my cheques (couldn't do that before!) and keeping track of how many calories I'm eating'.

And then they add, 'Oh, and I occasionally play the odd game on it, although of course that wasn't why I bought it'.

It's perfectly clear to us that computers without games are about as interesting as footballs without air. Even the gentle art of programming would rapidly become a bore were it not for the prospect of a mega-epic afterwards to soothe the aching brain.

Let's admit it, Electronic Entertainment is what the home micro revolution is all about. So people who say games aren't important want their Central Processing Units resoldering.

As if saving the earth from attacking alien forces weren't important. As if rescuing the girl from Kong's brutal clasp didn't matter.

So ping in, sit back and enjoy!  
Tony Mikhakis,  
Hoopay 25, Greece

## Tunnel Tip

● Congratulations on your excellent Plus/4 type-in 'Tunnel' (June 86). Some of your readers may be interested in the following modifications which enable you to use your joystick to control your spacecra!

```
390 JO = JOY (1); IF JO >
    127 THEN JO = JO - 128.
410 IF JO=3 THEN X=X+1
420 IF JO=7 THEN X=X-1
1250 PRINT "(CLR)"; SPC (7);
    " (WHT) JOYSTICK IN
    PORT 1"
```

1260

1270

Ken Alderson,  
Romford, Essex

## Get Stuffed

● I have become the most hated person on my street, my parents won't talk to me, my friends turn away from me, even my dog growls at me every time it crosses my path.

No, I'm not Quasimodo. The problem is Fred Rex's Insult Construction Set which you featured in last month's issue. I typed it in as soon as I'd bought your great mag and it's turned me into a really mean and nasty person. It's so easy to 'customize' the program to your own needs that I just let my imagination run wild.

I want to be a nice guy again. Please, please get Fred to write a program that generates greasy compliments.  
P. Warren  
Stratford, Cheshire.  
Certainly, you great steaming wazzock! Sorry.

Letters, Commodore User, Priory Court,  
30-32 Farrington Lane, London EC1R 3AU

# BUZZ

Here is the first glimpse of Domark's controversial *Split Personalities* game. The game will be in the shops by the time you read this and we will have a review in next month's issue. The long awaited *Glediator* game from the same stable will not be released until the Autumn so you will just have to wait for news of that.

Mirrorsoft's long-awaited *Harrier Strike Force* is finally approaching touch down in the shops. It's a flight simulator and strategy game, with battlefield scenarios, allowing you to play it as a simple and exciting shoot 'em up or at another level of tactical complexity, learning to handle the plane precisely while making decisions on the spot. Expect our Concorde man John Hutchinson to swoot up on his *Harriers* for this one.

Odin's Tom Watson is decidedly coy about who programs the games at the firm's Liverpool HQ. "We don't want to say who is involved in Odin". Interesting, Tom. Strange then that they should make breaking in to their office the aim of their next game — *Mission A.D.* You play agent 1Y who has 'time warped' into the future. He finds himself in a vast complex with a mission in life — to hunt down five criminals and liquidate them — *Blade Runner* — fashion. If you succeed you get a tougher mission with eight criminals — and so on, through sixteen levels of play. A pretty tough shoot out it looks too from this early screen shot of the 'Office'. That's our hero on the middle level — just having emerged from a teleport.

Just when you thought you'd delivered your last karate chop along comes *Tai Boxing* — another 'beat 'em up' to add to the ever-growing list.

The Anco game enables you to get behind end in front of opponents — so that you can circle each other as you fight — rather than facing off head-on like *Fist and International Karate*. By the way, *Fist* it is coming soon . . .

Epyx's new game for US Gold is *The Movie Monster Game* in which you control a monster through several classic monster movie scenarios rampaging through the cities of Tokyo, New York, London, Paris, San Francisco and Moscow. Choose to be Godzilla, a Giant Wasp or a Tarantula and pluck jets from the sky, eat tasty eyesores like the Eiffel Tower and burn whole populations in your path. Sounds great, but why no ants (Them) and King Kong? Well actually it's fair enough because the monsters are all based on duff Japanese films. Bad taste buffs stand ready!

Here's a sneak look at *Alleykat*, Andrew Braybrook's new game for Hewson. It's described as a futuristic shoot 'em up set on a giant spinning wheel suspended in space. There are two modes of play. You can either go for combat or flight. The object is to make it through the thirty-two circuits of the wheel, making three circuits each time. Sounds as if it could be a worthy sequel to *Uridium*.

# BUZZ

## Commodore holds out on new 64

Despite confirmation in America that the new 64C (you saw it first in last month's issue) will be the successor to the now geriatric 64, Commodore UK is being remarkably tight-lipped about when it will actually appear in the UK and how much you'll pay for it.

package, and maybe even a bundle that includes the 1541 disk drive.

So it's clear that Commodore's aging bestseller is getting a facelift in two ways. It's exterior now sports the C128's more upmarket beige coloured design. And with GEOS, typed as the beginning of "a whole new world" of products for the 64, it now features a

of utilities including a notepad, calculator function and alarm clock.

When you load GEOS, you get the 'Desktop' start-up screen which shows 'icons' of the programs you can use. Simply move the joystick to the appropriate icon, say geoPaint, press fire and it loads automatically. The screen display is 80-columns and is claimed to be readable on ordinary TV sets.

GeoPaint offers all the usual drawing facilities but, at present, operates only in two colours. Its most impressive feature is the ability to 'size' your drawings so that they print accurately on the printer. This is not a program just for on-screen doodlers, and is said to compare favourably with MacPaint on the Macintosh.

That resemblance goes for geoWrite too, which provides a set of fonts (bold, italic, underline, outline etc) similar to what you get with the Mac — fonts can also be printed in different sizes.

Since GEOS resides on disk, it can be loaded into any

Commodore 64. It's already selling in the States for 60 dollars. Commodore says it will make GEOS available separately in the UK, but has not fixed a price yet.

Commodore is obviously banking on GEOS to give the 64 a new lease of life. But to succeed, it must attract software houses to write their products under this new system. To make an impact in the UK, it will need to attract many more people to buy disk drives. And the only way to do that is to make them cheap. We'll keep you informed.

**Bodhan Buciak**

▲ **GEOS gives your 64 a trendy new windows and icons look.**

Playing it close to his chest, Commodore UK boss Chris Kady would only say "I can't give you a firm date but it will be in the next few months".

In the US, the 64C (which is completely compatible with the old 64) is being bundled with GEOS (Graphic Environment Operating System), the new disk based operating environment. And the combo is already on sale there for 250 dollars. Commodore UK intends to produce a similar

trendy windows and icons environment similar to the Amiga and Apple Macintosh.

And the sluggish 1541 will reap the benefits too. Being disk-based, GEOS is claimed to speed up disk access by up to seven times. But it won't do anything for people still using the datasette.

GEOS comes as a complete package that contains three extra programs. There's the geoPaint drawing program, the geoWrite wordprocessor and Desktop, a set

## Cheetah MACH 1

Cheetah describes its new MACH 1 as the 'Rolls Royce' of joysticks — it took no less than nine months to perfect. It's got four fire-buttons, autofire, a solid grip, suction pads and a £14.95 price tag. Will it take you nine months to break it?

# Rogue Trooper invades 64!

Macmillan Software normally noted for their educational programs have announced a new arcade label called Piranha, with three major autumn releases.

Of these the most exciting is a game based on *Rogue Trooper*, the genetic infantryman featured in 2000AD comic.

He will face a variety of situations including combat with his bio-chip buddies, Bagman, Helm and Gunnar. The overall aim is to track down the traitor who caused the death of his compatriots on Nu Earth.

The first release though, from Piranha is a game based on the forthcoming animated series 'The Trip Door' which features a group of spooks who live in a castle. Narrated by Willy Rushdon and heavily connected with Terry Wogan the series will go out five days a week on ITV during October.

Piranha's game involves the blob-like characters of Berk, Drutt and Boni. Berk, the main character has to complete a series of bizarre tasks during the game, each one involving the ghoulish creatures from under the trap door in the cellar. In one, for

example you have to catch slimeys from an underground stream and boil them for Drutt to eat using a fire-breathing monster. Also planned for release will be

another arcade adventure based on the great Werner Herzog film *Nasferatu* the Vampire.

The games will sell for between £7.95 and £9.95.

## Tales of the Unknown

Amblisoft is all set to launch the first in the new Tales of the Unknown adventure series from Electronic Arts. Called *The Bard's Tale*, it's a twin disk-only (£14.95) role playing game in which you must set free the city of Skara Brae from the evil clutches of Mage Manjar. MM, being a nasty piece of work, has all kinds of obstacles, mazes and henchmen to protect him. You must avoid these and explore the restless mazes and catacombs to get at him.

Being a role-playing game, you can get together a band of brave souls and pool your combat and magic powers to make things a little easier — there's also some songs to sing.

Amblisoft's second disk-only release (from their subsidiary in Germany) goes by the wacky name of *Lapis Philosophorum* — *Philosopher's Stone* to you. Poor old King Gudfred needs the stone — it has magic powers — to save his kingdom from his nasty stepson who's the impatient heir to the throne. In fact, Junior is so fed up of waiting for Gudfred to kick the

royal bucket, he's all set to poison him and grab the kingdom straightaway.

You must wander through seven different routes and 83 screens to find the difficult-to-pronounce stone. From what we've seen already, graphics are colourful but text input seems to be two word only. Look out for both in next month's *Into the Valley*.

### Print Shop Friends

Remember our enthusiastic review of Print Shop last month? If you dashed out to buy one, you'll want to know that a 'Companion' disk is now available that offers a powerful new set of design tools: a multi-tool Graphic Editor, Font and Border editor. You can also make new creature graphics and tile backgrounds. Also included are 12 new fonts, 50 new borders and a set of Broderbund game characters including Choplifter and Karateka. That's a lot of new features but the disk doesn't come cheap at £29.99. More details from MGA Microsystems on 05806 4278.

### Shades of Miconet

By the end of August, Miconet bulls will be able to play Shades, their very own MUD-type game — and at long last Miconet reckons that Shades is competitively priced at 99p per hour, with no registration fee. And if you arrest it at off-peak times, you'll get away with local telephone charge rates. Is it as good as MUD? We'll let you know soon.

### 80-column Solutions

If you've got a C128 and one of those RGB monitor/TVs and you're wondering why you can't connect them, Trilogic may be able to help. They have a range of I-CON RGB to RGB converters that covers the more popular monitor/TVs giving you a true 80-column colour medium-res display. I-CON 1 connects to the Ferguson TX range, I-CON 2 to Hiachi and Granada Rentals TVs (the 7 pin DIN sockets) and I-CON 3 to televisions with the SCART Euro connector. All types sell for £33.95, and you can get more details on 0274 684269.

### Cheapo Bubbles: The

ideas depr at Bubble. Bus must have worked overtime to think up a name for their new cheapo range — Mini-Bus. Anyway, their first cheap release for the 16 and Plus4 is called Trizens, described as a last scrolling game with 'more than a dozen aliens' (sharp intake of breath). We'll be renewing it next month.

Using **CONTINUE** afterwards you can return to the program. **MONITOR** - Takes you into the Machine language Monitor.

**NOW AVAILABLE FROM LEADING RETAILERS**

\_\_\_\_\_

the carrier, depending on whether you are coming or going. Remaining fuel for each plane in the air is depicted by a bar graph. This is important because if you don't turn back with half your fuel remaining the plane will crash when it runs out.

**Use your instruments to direct the carrier into the wind, ready for takeoff.**

There are three other ways to lose a plane. You can literally lose it, off the edge of the map. Seconds before this happens a verbal "plane off map" warning is given, and some sharp work with the joystick is imperative. It can also be shot down by enemy fighters well-equipped

## FLIGHT DECK

**COMMODORE  
64/128  
EAGLESOFT**

**Price:  
£8.99/cass  
£8.99/disk**

International terrorists have stolen a nuclear weapon and holed up on a Pacific island. From here they plan to drop the bomb on New York and only you can stop them.

As usual, we are expected to do the American's dirty work for them. You must take the nuclear-powered aircraft carrier HMS Indispensable to the danger zone, map out the island, and bomb the terrorist base to oblivion.

Flight Deck is played over three screens; most of the action takes place on the carrier itself, where you are presented with a seagull's eye view of the proceedings.

The deck of The Indispensable occupies the top half of the screen, complete with take off and landing runways, aircraft lifts, parking bays and tractor. At the bottom of the screen is a radar display showing wind speed and direction, course, cross winds, weather, and damage status. Here you will also find out what planes are on the hangar deck and whether they are ready for take off.

There are ten bays containing four fighters, four reconnaissance planes and two bombers. The bay is shown in red until a plane has been refuelled and serviced ready for take off.

There are several things to be done in order to get a plane in the air. First, using the joystick you must manoeuvre the tractor above the lift, collect a plane and tow it to the take off runway. The take off sequence is started by pressing the fire button. A square indicates the correct flight path of the plane down the runway and this must be matched very closely to avoid a messy disaster.

Cross winds will blow the aircraft off course and if they are very severe make a take off impossible. For this reason you must manoeuvre the carrier so that it's sailing into the wind before attempting a sortie. Adjusting speed so that the wind is at 28 knots makes this part a doddle.

Next you must check where your plane is going. Pressing F3 brings up the map screen and the 64 announces "map" in a kind of high pitched whine. The map depicts the island and surrounding area which is different each time you play. It discovered at least half a dozen variations.

To set the plane on course the sight is first positioned over the plane and then the destination. This will always either be the island or

terrorists there). If you make it this far you may crash on landing, but more about that later.

**The reconnaissance plane photographs the island to reveal the terrorist base.**

island is mapped, a target marking the terrorist base appears. The only problem with reconnaissance is that you are periodically interrupted by enemy fighters and must divert your attention to shooting back.

Theoretically at least, it would be advantageous to have fighters as well as reconnaissance planes over the island. According to the manual,

fuel for short missions. Apart from that, landing is the most challenging and fun part of the game.

When a plane approaches the ship the message "plane landing" is waited at you. The game then cuts to a sideways on view of the aircraft making its final approach. Using the "manthall" or light landing device, you must guide the plane

the deck when the carrier screen appeared. That would no doubt account for the horrible skidding noise. Landing is about a hundred times more difficult than taking off, but much more fun. The plane makes a dead authentic, high pitched jet scream — wallowing turning up the volume and annoying the neighbours with.

As a strategy game backed up by some good arcade action Flight Deck is good solid stuff. Not quite in the megamane mould, but a worthy offering all the same.

There are a few bugs and, in one or two instances, poorly thought out gameplay. Planes parked on the deck aren't destroyed if you switch screens. Sometimes when you take off the plot bottles out and turns around for an immediate landing, if this

Watch the coloured lights to make sure you're on target to land — a stiff challenge.

Indispensable comes under attack when you are on another screen the non-interrupt driven sound screams

Once a plane is in close proximity to the island you switch to the island map and the 64 says "island" not to let you know where you are. Using the reconnaissance planes the surface of the island, usually grey, must be photographed.

As you fly over pressing the fna button, surface detail is revealed and eventually, when the the whole

a new hit from a fighter is enough to send a terrorist plummeting downwards, others need a direct hit.

In practice this turned out not to be so. As early on plane can be controlled at a time you may as well use whatever you've got. It's worth bearing in mind, though, that you only have four reconnaissance planes and when they're all gone your chances of mapping the island are reduced to nil.

If you do manage to map the

A square indicates the correct flightpath on takeoff.

along the correct flightpath. Coloured lights indicate whether the plane is too high, low, to port, or starboard (nautical terms as sailing types like to say) and you must make the appropriate adjustments.

If you are miles out the landing is aborted and the plane flies past for another go. Several times I thought I'd made it, but the plane wasn't on

"ship under attack" incessantly, making it impossible to do anything other than return to the carrier and run until out of range.

In spite of all that I didn't go to bed when I played this until well after late in the morning (what did your mum say? — Ed) and that has to be some kind of recommendation. **Kas McMillan**

whole island (I did it once!) it's time to send in the bombers. Bombers can't shoot back at enemy aircraft and a direct hit must be scored on the enemy base to destroy it.

To stand any chance of completing the game it is essential that you learn how to land on the carrier deck. Unless *The Indispensable* is very naive (in which case it will be attacked), planes only have enough

## "COMPUTEREYES" VIDEO DIGITISER FOR YOUR 64/128

COMPUTEREYES digitises from any video source, including camera, video recorder and video disc. The PAL version of this popular system by Digital Vision Inc. is now available from Stem Computing. COMPUTEREYES connects the video source to the Commodore through the Video I/O Port. An image is acquired in less than 6 seconds and multi-sampling modes of the same image allow a realistic grey scale picture to be constructed. No external power supply is required. Comprehensive software on the COMPUTEREYES disc contains image capture, image-packing, saving and loading routines all driven by a Menu ex. routine program. Individual routines can easily be incorporated into your own programs. The Manual gives details. Optional enhancement software is available for interfacing COMPUTEREYES to Koolha Pad, Flexidraw Doodle, Printshop and Newsroom image processing utilities. (COMPUTEREYES is also available for Atari 800/800XL/130XE, Apple II series and IBM PC).

COMPUTEREYES £129 Enhancements only £14 Add VAT at 16%

# TIME TRAX

If you enjoy a game with a challenge Time Trax could be the game for you. The action starts in your nuclear bunker shortly after the Holocaust, and will take you backwards and forwards through the time portals searching for the most treasured possessions of the 'Eight Minds' — who and what these minds are, you are not told. Return each to its own and find the four runic tiles needed to stitch up the fabric of space itself, and you've saved mankind's future from the bad guys. Well, I never said it would be easy (or arduous) and to make things worse, your efforts are hampered by all sorts of living nasties.

The action window occupies about half the screen, the other half contains option menus and status indicators, energy displays, weapon readouts and runic tile storage areas. You will need to use the menu options to find and manipulate the various artifacts on each screen.

To use the menu you have to flick the joystick back whilst holding the fire-button down then release the fire-button. Until I discovered the secret, I found this very hazardous indeed!

booklet has a table showing when each portal will open and where it will take you, the cycle repeats every ten minutes.

Nasties will appear and attack you if you remain on one screen for more than about 30 seconds. This will reduce your energy which can only be recharged using a potion or using

▲ **Three nasties with jet packs on their backs fly towards our hero.**

▲ **Nothing afloat in the grave yard.**

a spell. If your energy falls to zero, you simply start all over again.

Although I found the joystick a little far fetched, I quickly became captivated despite the strange way in which the joystick is used to access the menus, but there is a knack to it so a little perseverance will help. Graphics are good looking, the character moves around smoothly and the continuous soundtrack is brilliant.

In all, Time Trax is a very good game, guaranteed to test your mental faculties to the full. You can start playing Time Trax almost immediately, but it could take you years to finish.

Fred Reid

▲ **The concentric squares in the centre of the screen is a time portal — you have to enter these quickly as they won't be there for long.**

The desert Time Zone is one of the trickiest to search.

Nasties decrease your energy rapidly.

Each screen (there are 3 screens in each of the 7 time zones — 21 in all) is split into three levels, accessed by stairways, ladders and other climbable things. Doorways will take you through to the other screens in that time zone, and any furniture, fittings and fixtures can be searched for useful objects (guns and crossbows are particularly useful).

Every few minutes, a time portal will open, and you can jump to another time zone. The instructions

Sword fighting on the palace lawn and not a royal baby or photograph in sight.

### Axeman

This concludes your Arrianian efforts. Two men lay in to each other with that by now familiar clanging of metal striking armor.

Knight Games is certainly fun, but as the descriptions demonstrate it also sounds a bit samey. The lighting scenarios all take place against different backgrounds and with different weapons. That wouldn't be so bad if the gameplay was precise.

The major problem is really that you never quite feel fully in control of your characters. In fact you can wait for your opponent to move and adjust your attack/defense accordingly. Here you tend to find yourself blindly thrashing the sick in

the hope your opponent will run out of energy before you do.

That's a shame because I like the approach. Programmer Jon Williams has done a beautiful job on the graphics as well. The backdrops are varied and colorful, the movement of the larger characters is smooth and coordinated. Blows seem to raise in all directions, although I had problems with defensive moves.

In all, Knight Games is a worthy addition to the best 'am ups, it's just not up there at the top. A pity because I feel it could have been with a few adjustments and a bit more imagination. Did English and Jon consider the possibility of a jaunt for example? That would have been brilliant.

Sira Miha de Pattandee

Your time decreases as the candle (top left) burns down.

phantoms — sacs with long handles and appears on the top in case you didn't know.

### Swordfight 2

Takes you onto the second side and onto a different location. You fight with huge broadswords in a field — probably in case you hurt someone. This is particularly disappointing and reminiscent of the two similar skating options in Winter Games. You wonder if they're there because the programmer ran out of cash or ideas.

### Crossbow

Similar theme to archery, but it's different enough to present a new challenge. Here your targets swing around on trees making the job of aiming that wandering target cursor

Those lethal looking balls with spikes on were called 'maces' and it was a favourite pastime of knights to knock the living daylight out of each other with them.

## Competition

**D**o you know your eschutcheon from your lozenge, or your flaunche from your roundel? Do you know what two lions reguardant or two heads cabossed are?

Well, they're all terms used in that wierd and wonderful subject of heraldry. All the knights in Knight Games have their own coat of arms — you wouldn't be able to tell them apart otherwise, with their helmets on. It's about time you had a 'customised' coat of arms of your very own. So in this month's great competition, we're asking you to design a coat-of-arms for your family — don't get smug if you've already got one.

So get your estoiles and crescents together, your mullets, water-bougets and cinquefoils (don't forget your felt-tip pens) and draw a coat-of-arms that would be suitable for your family. We've done our own Commodore User coat-of-arms (above, right) just to give you an idea. As a tie-breaker, we'd like you to explain briefly what your drawing depicts and why.

So what do you win? We'll give the winning entry to a professional artist to draw up a coat of arms you can hang in your family castle, baronial hall or just in the lounge. We're also giving away 30 copies of Knight Games as runners-up prizes. Get cracking 'cos we want your entry by the 15th August. Don't forget to enclose an SAE and put your name and address on the back of the drawing if you want your entry back. Send to:

Knight Games Competition, Commodore Users, 30-32  
Farringdon Lane, London EC1R 3AU.

# A NEW TAPE TO DISK SYSTEM

## THE EXPERT CARTRIDGE — A NEW TAPE TO DISK SYSTEM FOR THE CBM 64/C128 (MODE)

- FREEZES AND SAVES MOST PROGRAMS TO DISK
- THE PROGRAM IS SAVED AS ONE FILE
- PROGRAMS ARE COMPACTED TO REDUCE THE AMOUNT OF DISK SPACE USED
- YOU CAN SAVE 5 OR MORE PROGRAMS PER DISK
- PROGRAMS ARE LOADED BACK VERY FAST BY THE BUILT-IN FAST LOADER
- MOST PROGRAMS WILL LOAD BACK AND RUN IN LESS THAN 30 SECONDS
- A POWERFUL BUILT-IN MACHINE CODE MONITOR INCLUDES A RESTART COMMAND PLUS ALL THE USUAL MONITOR FUNCTIONS
- NO NEED TO USE THE CARTRIDGE FOR LOADING BACK
- EASY TO USE — NO PROGRAMMING KNOWLEDGE REQUIRED
- USES A RAM CARTRIDGE AND DISK BASED SOFTWARE FOR INSTANT UPGRADING
- ALSO DOES DISK TO TAPE AND TAPE TO TAPE

Although not the first, the expert cartridge tape to disk system out performs all other similar products regardless of cost. Even foreign products costing twice the price cannot match the expert's performance. Why pay for outdated ROM based systems when the expert cartridge can be upgraded to meet the challenge of the most recent software for very little cost?

FOR C128 (mode) and C64

New **£31.95** New

PRICES INC. VAT, P&P

FEED UP WITH WAITING FOR YOUR PAYOFFITE PROGRAM TO LOAD FROM TAPE? TRY TO LOAD WELL IN LESS THAN 30 SECONDS! ALMOST ANY PROGRAM WILL BE LOADED AND RUNNING WHEN YOU USE THE EXPERT CARTRIDGE TAPE TO DISK & DISK TO DISK SYSTEM.

colour change to give you advance warning. For inexperienced players (not me!) there is a help icon which will, when activated, give you a helpful message.

To help you with your task, useful objects are to be found such as a gun which will blast everything in sight. Also for all you budding graffiti artists a spray can to mark out the maze is to be found.

Use the teleports to travel around in the asteroid.

To find the objects on the first level you will need the metal detector. But how and where you find that is a close kept secret.

You must be choosy though as to what items you will and won't need as only four can be carried at one time. The asteroids are set out in a series of caverns with various teleports and anti-grav lifts scattered around the place.

## CORE

**COMMODORE  
64/128  
A'n'F  
SOFTWARE**

**Price:  
£9.95/cass**

Pick up useful objects — if you can find them.

Poor old A'n'F, after over two years they are still plugging their "successful" Chuckie Egg programme. Why? Simply because they haven't produced anything worth advertising since! CORE though, seems at last glance to look like just another *Knobs of Hazard* clone — but don't be fooled.

The plot is the usual "save the human race" type, but A'n'F have given me an unwanted headache by putting the instructions in the form of lots of little memos from H.O. Despite this I managed to get this out of them.

Deep, deep in the midst of space there is an asteroid. A few months ago scientists who were sent to explore that asteroid died. Your job as Asteroid Andy is to go up there and find out just what happened. This is done by finding the new pieces of a biological memory bank.

The game is partly ice-driven. As well as having the usual pick up/drop races, there is also a save position facility which comes in very handy indeed if you want to have any chance of getting through the one thousand plus locations on the asteroid.

The asteroid has four levels, each filled with plenty of hazards, from deadly plants to flying creatures. Every time you touch one of these you're given a message of warning. If you are touched too many times you're a goner, that is unless you can find and install one of the new batteries which are scattered around the asteroid. Finding the battery is easy but installing it is not — how you do it is quite beyond me. But so you know where this needs installing the programme have kindly put in a

This adds to the trickiness of the whole thing as many a time I have found myself wandering about in meaningless circles. The game on the whole is extremely tough. I think perhaps three lives instead of one would have been more sensible. But apart from that and the annoying instructions CORE is very good.

The sound is just about average but that can be excused as it was generated from the Sinclair (in it is a *Amstrad*!). The graphics are good but a little colourless. The sprites are large and well drawn with some nice little touches included in the backdrops used to good effect.

CORE actually managed to drag me away from my 64 for the World Cup — and that's saying something. The standard of arcade adventures seems to be improving so and, this particular one should keep A'n'F shooting proud for the next two years.

Fredy Hamilton

Overall

Myrtle swims around the wreck looking for bottles of stout to give her energy.

play the fatted Myrtle, swimming around the hazardous waters in her quest for Gordon. You'll find many different objects to help you, which must be used in their correct locations.

The fishy inhabitants of the sea are also repulsed by Myrtle and attack her with ferocity. This diminishes her energy which, thankfully, can be replenished with the bottles of stout that are lying around.

Now I know this all sounds like an arcade adventure (and not one of the classic ones), but what sets this game apart is the hilarious scenarios and the amusing gameplay. The graphics are also quite funny, although they lack polish.

Price:  
£9.99/cass

# MERMAID MADNESS

Myrtle wants a man, a husband, a fish... someone to not oysters with when the sun sucks down over the heaving sea! So begins the blurb for Electric Dreams' latest Mermaid Madness. That's right, Myrtle is the aforementioned sea mermaid.

Exotic as Myrtle might sound, she is, in fact 112 years old and looks, smells and feels about as good as a hippopotamus. Yet like everyone else

unfortunately isn't 100 per cent upstairs.

So Myrtle, flailed by her hundred-year old passion, discards her clothes and makes for Gordon. Gordon may not be clever but he knows when to make a quick getaway. So he dives into the sea and hides in an old wreck unaware that Myrtle, being a mermaid, is an Olympic class swimmer.

That's where the game starts. You

Still no sign of Gormless Gordon — Myrtle's getting desperate.

While Myrtle and Gordon are well represented on screen, the sea animals are not. The seabed is nicely drawn but tends to become unclear and muddy in places (sounds pretty realistic to me — Ed).

The three pieces of music (identified by my sister as famous ballet tunes) are unfortunately rather hard on the ears and had me reaching for the volume control. Which is a pity, because it detracts a lot from the game.

Mermaid Madness is very enjoyable, it's tough and challenging and there's a nice lighthearted feel to it. Playing it certainly brightened up my day.

Colin Clarke

Our hero hides behind the propeller to escape passionate Myrtle.

Myrtle has various coral deers which, not surprisingly, have yet to be satisfied.

But the answer to her prayers, in the shape of Gormless Gordon, is sitting on the beach. Gordon is an unsuccessful scuba diver who

# THE WAY OF THE TIGER

**COMMODORE  
64/128  
GREMLIN  
GRAPHICS**

**Price:  
£9.95/cass**

**Screen  
Star**

Since you were too small to remember, I'd better tell you that you've lived since childhood on the island of Ota in the care of monks who have trained you to become a Ninja. But now is the testing time for you must face the three tests Naguchi the Grand Master has set you. But will you conquer them, glasshopper?

This is the challenge you must face if you dare play Gremlin's Way of the Tiger. As you may have gathered it's another martial arts game (surprise, surprise).

The game is set in three parts: Unarmed Combat, Pole Fighting, and Samurai Sword fighting. The sections follow each other in the test, but don't worry if you aren't good enough to even complete the first one because Gremlin have shown us a practice mode allowing you to have a go at whatever battle you wish. So when you think you're up to it

**Pole Fighting — both  
your opponent until he  
falls into the river.**

**Unarmed Combat —  
you face not just  
human but ghostly  
opponents.**

you may play the whole game.

Your energy is set up into two groups, endurance and inner force. You lose one inner force point for every circle of endurance lost. The game ends when you're all out of that precious inner force.

**You're all out  
of inner  
Strength and  
out for the  
count.**

Unarmed Combat is probably the easiest of the three sub-games simply because it's the most familiar, with all the normal blows and kicks, low punch, flying kick etc.

This may sound like a normal list to list fight but it's far from it. Not all your opponents are human; you'll have to negotiate ghosts and maybe even the odd rock or two? Unarmed combat is a good game in its own right, every software house would have sold it on its own at full price

**Finish this one off and you must meet the Grand Master himself.**

Next, you move onto Pole Fighting. This is the second time that a software house has tried to put this on computer but this version is far superior to Melbourne House's Fighting Warrior. The graphics are better, action is much faster and scrolling is both ways which gives an excellent view of the game.

The Pole Fighting bout is set on a slippery pole over a river. Short of stamina and inner force you must knock out a variety of opponents sent by the Grand Master himself. The moves consist of blocks, blows and jabs. The blocks are often hard

**Samurai opponents have extra abilities which you can't copy.**

**Samurai Sword Fighting is the last and toughest test to pass.**

to use at the right time but when you finally lose them they can be very useful.

Blows and jabs are basically what you'd expect; jabs are much faster to use and less powerful than the blows. This is definitely my favourite of the three events.

Samurai Sword fighting is the last and toughest test to pass. You must face the toughest warriors and eventually the Grand Master himself if you want to become a Ninja. Again the moves are what you'd expect in a sword fight. The graphics

are up to the same high standard, with fast movement in front of some excellent scenery. But watch out, these opponents have tricks up their sleeves which you will not be able to perform!

Despite the lack of originality I was pleased with the whole game great graphics, good gameplay. Samurai are starting to reach a very high standard in Commodore software and are sure to have a massive hit with this, especially if they are charging only a tenner for what amounts to three good games.

# BUMP SET SPIKE

## COMMODORE 64/128 MASTER TRONIC

Price:  
£1.99/cass

Mastertronic's new Entertainment USA label borrows from a piece of Volleyball legend for the strategic role in the first game in this range — 'Bump Set Spike'.

A word of explanation will be welcome to non-Volleyball buffs. A 'Bump' is your first punch of the ball, well not strictly a punch.

contact is made with the inside of the wrist. A 'Set' is the second hit, the one that sets your partner up for the point-winning smash, or 'Spike'.

That all sounds fairly easy but let me assure you that carrying out these manoeuvres in Mastertronic's game is anything but.

Problem One: the movement of the ball is very slow and jerky. Its trajectory is anything but realistic and the attempt at perspective has failed entirely. What this means is that it's difficult to judge where to stand when the ball is traveling up or down the screen.

You do get some help in positioning your players in the shape of an 'X' shaped cursor that shows you where the ball is going to land.

When your opponent hits the ball back to you the 'X' will move to your side of the net. You must then line up your player's arms with the X and hold the fire button down for a

period of time to shoot the ball back again. The length of time you keep the fire button depressed determines the strength of the shot.

You have three main game play options but Head to Head against a

Start in the gym — as you don't trip over beach debris.

friend is by far the most lousy way to play the game. Solo against the computer is deadly, the computer is unbeatable, or you can even compete with a friend against the computer, but it's still unbeatable.

Bump Set Spike is a difficult game

replete with golden sand, a ghetto blaster pumping out an awful racket and a backdoor strip of blue sea at the top of the screen. Occasionally a water skier gets dragged by but he looks more like a helicopter.

The beach scene is more difficult to play than the gymnasium because there is seaweed which looks suspiciously like 'doggy doos' as my opponent dubbed them (thanks Edge — MPI makes the 'X' cursor difficult to see).

Another nice touch is the speech bubbles that appear from time to time. The volleyball players have an annoying habit of tripping up from time to time for no apparent reason

On the beach — a bit more difficult and you won't get a tan.

(probably on the doggy doos — MPI). This will result in a theatrical dive like Diego Maradona looking for a penalty and a speech bubble coming up with "Bum!" or "Aargh".

You also get a speech bubble if you manage a 'spike' — no easy feat. I must admit though that when the players exclaim "What a spike" when the ball has been smashed out of play you have to question his powers of observation.

So would I fork out a two spot for it? Yes I would, just about. The main reason is that there aren't many decent two player games around and although Bump Set Spike isn't going to set the world alight it's absorbing, frustrating, and challenging. Now back to the beach.

Eugene Lacey

Nine title-screen graphics — not as good in the game itself.

to evaluate. As soon as it loads you think "God what lousy graphics!" then you notice the equally appalling music and you go to notice it useful, in the end, you reach for the volume control.

Despite these drawbacks you may well still find yourself playing it several hours later, I did anyway.

One of the better points about the game is that it has two backdrops against which to play — a gymnasium and a beach.

The beach backdrop is impressive

Take a boat to a different location.

program is on the one disc. Should you choose to create your own team of characters (you could opt for a pre-programmed bunch of wondrous if you can't be bothered), you will have to define each member's attributes (strength, dexterity etc) as well as his/her hair, race (dwarf, wizard, human etc), profession (warrior, ranger, thief etc) and give each a name (they needn't be silly ones).

At this point, it would be a good idea to save your character definitions just in case you get slaughtered by a roving monster in the first minutes of play.

To control your team of characters, you type in an instruction and, where it's possible, the relevant character performs the action. A novelty here is a shorthand system that takes the drudgery out of the typing part. All

# MANDRAGORE

For many years the land of Mandrakore was ruled by a wise and pithy-spoken monarch, King Jorian (Jorrie? why not Jelae or John, or even Fred?) until he was struck down accidentally by a shooting star. With the end of King Jorian's benevolent reign came Lord Yared Nee (another silly name) who proceeded to impose a reign of evil tyranny on this hitherto peaceful land.

Thus goes the story. Obviously it's down to you to create and direct a team of four characters, a sort of medieval 'A Team', who will seek out and depose the naughty dictator (the plot seems familiar somehow).

Your team will have many mysteries to solve, and monsters to kill far run away from before you are able to confront the evil lord and do battle for the political future of Mandrakore. A lot far fetched? Read on.

Mandrakore is a multiscene adventure game featuring a huge

scrolling map of the land, and many detailed graphic scenes depicting the interiors of castles (referred to as chateaux), villages and monster-infested swamps. The graphic data for each of the ten chateaux are stored as separate files on both sides of the second of two

discs. The 28 actions can be entered by typing in the first one or two letters, the program then prints the word (such as kill or attack etc) in full. This took a bit of getting used to, and I'm not altogether sure it wouldn't be easier typing instructions in full.

Search the villages for useful objects — like a better 64 game, maybe.

The master map enables you to travel long distances.

cassettes, the first contains the actual program itself.

This means that whenever you wish to enter a chateau, you have to load the relevant file from the appropriate side of the data cassette (if it sounds complicated, it's because it is). Disc users however, will be pleased to note that all the chateaux data, as well as the actual

'In Map' mode, you can direct your team rapidly over the terrain to find a suitable village to pillage or a chateau to investigate. Movement is in four directions, North, South, East and West, and your travels will take you through woods and swamps and across plains and seas.

When your team is ambushed by a warrior emblem in Map mode) sets

▲ Goblets and shalises should be bagged.

▲ Your team of four shorosters is displayed together with objects visible on the screen.

▲ This monster is about to kill a fair maiden unless (Don't you dare give the game away. Ed.)

a village or chateau, the map disappears and a '3D' picture appears, with various objects in view including any of your characters still living. What you do with the many

items you find while searching is up to you, but each scenario contains a problem to solve. Clues can be found in the collection of short stories accompanying the instruction booklet

But playing the game was a bit of an anticlimax after struggling through page after page of instructions. It turns out that the villages are all almost identical as are most of the chateaux. The graphics are of quite high

▲ The juggler is a dumb jester — hardly worth talking to really.

▲ One of the nine shateaux — each one with its own unique puzzle.

quality although usually devoid of action. If, for example, you enter 'JIM STEALS KEY' Jim will then move towards the key and attempt to steal it. Sound is limited to a short repeating theme, suitably medieval in style and not too painful to the ears

Personally, I would far rather play a decent arcade game or a good text adventure! If you get the impression I'm not too impressed with this game you obviously catch on quick!

## MAIL ORDER ADVERTISING

### British Code of Advertising Practice

Advertisements in this publication are required to conform to the British Code of Advertising Practice. In respect of mail order advertisements where money is paid in advance, the code requires advertisers to fulfil orders within 28 days, unless a longer delivery period is stated. Where goods are returned undamaged within seven days, the purchaser's money must be refunded. Please retain proof of postage/despatch, as this may be needed.

### Mail Order Protection Scheme

If you order goods from Mail Order advertisements in this magazine and pay by post in advance of delivery, Commodore User will consider you for compensation if the Advertiser should become insolvent or bankrupt, provided:

- (1) You have not received the goods or had your money returned, and
- (2) You write to the Publisher of Commodore User (narrating the situation) not earlier than 28 days from the day you sent your order and not later than two months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the Advertiser has been declared bankrupt or insolvent up to a limit of £10,000 per annum in respect of all insolvent Advertisers. Claims may be paid for higher amounts, or when the above procedure has not been complied with at the discretion of Commodore User, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of readers' difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payment made in response to catalogues etc. received as a result of answering such advertisements). Classified advertisements are excluded.

# Now the great record-breaking Commodore Show moves North

**Renold Building, UMIST,  
Sackville Street, Manchester**  
**Friday to Sunday, September 12, 13 & 14**

The Official Commodore Computer Show – the show that hit the headlines when it attracted record London crowds in May – now moves North, supported by all Britain's leading suppliers of Commodore hardware and software. Spread over two exhibition floors will be stands featuring the very latest developments for the entire Commodore range, including a wide variety of newly-released games, business and utilities software. It's going to be an action-packed show that will bring you right up to date with all the exciting developments now taking place in the Commodore world!

#### **EASY RAIL TRAVEL!**

300 yards from Piccadilly railway station, with speedy connections from all parts of the North, Midlands and Wales.

#### **EASY COACH TRAVEL!**

Bus and coach stations serving all parts of this vast region are just a short walk from the UMIST campus.

#### **EASY PARKING!**

No problem finding somewhere to park – either within the campus itself or nearby car parks.

**On show for the first  
time outside London –  
the fabulous Amiga!**

#### **AMIGA THEATRE**

Demonstrations of the most talked-about computer of 1986, showing the growing range of business and recreational software.

#### **8-BIT THEATRE**

Leading Commodore experts show how to make the most of the 16, 64 and 128 range, answering questions on games, graphics, utilities and communications.

#### **PLUS!**

Live shows from top groups – Commodore music as you've never heard it before!

**Avoid the  
queues!**

Get ready for take-off, your mission is to photograph secret documents at the enemy HQ.

necessary to a multi-load cassette when it goes on sale in the UK.

It is divided into three parts. In the first part you have to fly your helicopter to the enemy HQ and photograph the secret documents and War Plans.

The camera and several other items are selected from a separate inventory screen before you set off. Other items that may be worth taking with you are the sleeping-gas canister, bombs, forged papers, and the mine detector.

Chris Grey is proud of his sleeping-gas canister: "The idea was to make it as non-violent as possible. So you don't kill the guards you just put them to sleep."

# INFILTRATOR

Eighteen year old Chris Grey could cause a major upset by stealing the number one slot away from the much-fancied coin-op connoisseurs with his brilliant three part game, *Infiltrator*. But Chris won't be surprised by his success, he's already tasted the big time as co-designer of the international hit, *Boulderdash*. Eugene Lacey phoned Chris at home in Canada to discover the identity of the "Infiltrator".

Who is the Infiltrator? That's the question US Gold would like you to chew over all Summer.

Your instructions couldn't be plainer.

and they are paying to plant the question in your mind with a series of 'leaky' advertisements in various computer magazines.

Sorry to spoil the secret US Gold but the public have a right to know, you know.

The game's creator Chris Grey has the answer. "His name is Johnny and he is the ultimate Super Hero. He has everything, he's a super soldier, movie actor, rock star, and explosives expert all rolled into one." His friends and sometimes the

Commodore 64 call him 'Jumbo baby McDave'.

Jumbo will seed all his skills to tackle the 'Mad Leader' who, as boss of 'The Enemy', is plotting to destroy the world.

Before you all start complaining about this being a veiled stab at Colonel Gaddafi and power politics in general, Chris would like to say two things — that he is a Canadian — not an American (OK, Chris) "people can read what they like into it, though I don't have a political motivation".

The game took eleven months to write and is by any standards huge using both sides of the disk and

Actually getting to the enemy HQ to complete the first part of the game is not easy. You have to master the chopper's controls. It does have quite a few simulators like instruments to add to the realism.

"I wanted to get the best of both worlds. I wanted the feel of a simulation combined with the playability of the arcade game."

The concession to arc fans means

Enemy fighters ask you to identify yourself.

Preview

that you have to turn on the engine and wait for the blades to reach a speed of 2340 rpm before you can pull away.

The sound FX are every bit as impressive as the situation in detail. You can hear the engines gradually building up until the blades are hurtling around. The chopper pulls slowly skyward with the buildings in the foreground gradually sinking into the bottom of the screen.

The hand you can see in the screen shot moves as the chopper banks to the right and left. Johnny's finger can also be seen moving to the fire-button when you press fire on your joystick.

When you are in the air flying towards the enemy HQ, you will be

enemy's missile base. This takes you right into the heart of the enemy camp, and you'll need to use all your guile to deal with the guards.

The third part of the game is the final conflict with the Mad Leader where you must destroy his HQ. Leader remains anonymous to the end of the game. He's just there — an evil presence lurking inside your 64.

When I spoke to Chris Grey he was already starting work on the sequel to *Infiltrator* — or, as he called it, the 'Mammoth Dak'. This takes Johnny into new and even more perilous adventures and possibly even a head-on confrontation with the Mad Leader himself. There is also

▲ View from the cockpit, both hands move with your joystick.

# ATOR

boozed by the Mad Leader's jets. First they will request identification. If you can't satisfy their questioning it's rough for the fire-button time.

If it does come to a dog fight with the Leader's jets, Johnny's chopper is well armed to deal with it. It carries heat seeking missiles, cannon guns and flares.

The second challenge is to rescue a captured scientist and take out the

Nerve Gas, and possibly a nuclear reactor about to blow in Part Two.

Chris Grey believes that *Infiltrator* will take even the best of gamers a good while to crack. (We'll see about that. Ed) His advice to would-be 'Jimbo baby McDavis' is to "always keep in contact with the enemy and contact them first — before they contact you." "Go easy on the guns and use your gas sparingly in the

▲ Looks like your chopper's a write-off, take more care next time.

▲ A mixture of flight sim and arcade action.

## Ground Mammoth.

Chris Grey's work on *Boulderdash*, *Wacky Ward* (Remember that one! Ed) and now *Infiltrator* must make him the most successful game writer in the business for his age. So does he intend spending the rest of his days coding computer games? "No way, I want to write film scripts or TV plays

... I'd like to stay in entertainment though".

We'd like you stay there too Chris. Keep up the good work. Catch a full review of *Infiltrator* next month.

# WINTER EVENTS

## WINTER EVENTS BY UDO GERTZ

### MENU

There is a lot of  
events in this game  
creating some events  
for you to play.  
The game is  
easy to play.

## WINTER EVENTS

C16/PLUS4

Compete in the six thrilling events:  
Biathlon, Bobsled, Ski Jump, Sledding,  
Down Hill and Speed Skating.  
The events start with an opening  
ceremony accompanied by thrilling  
music. One to four players can  
select the country they wish to  
represent. The events with some  
of the most stunning graphics  
seen on C16/PLUS 4 provide a  
perfect backdrop as the chase  
for medals progresses.  
TURBO LOAD ensures that you  
don't get a chance to cool down  
between the events.

A QUALITY GAME  
FOR C16 AND PLUS 4 OWNERS  
**£7.95**

# ANCO

This Ninja warrior has all the agility of a doll with wooden limbs and joints.

a great many have been average, and more than a few not worth the tape they were recorded on.

Ninja Master doesn't fall into any of those categories. Quite simply, it is the biggest load of rubbish it's ever been my misfortune to load up. I feel gritty about feeding it to my poor old 54. It is like a dog it would be chewing grass in the garden and I'd be explaining my behaviour to the RSPCA.

And so in the game Ninja Master

which side, and at which height the shadows come at you.

Animation is crude. The stationary ninja sprite is simply substituted by one of four others with the appropriate kicking or punching action. It's all very easy and dead boring.

Test two — the karate chop. Stationary ninja spine stands by the block of wood. You must wiggle the joystick back and forth until the power meter passes the critical level. You have twenty seconds in which to do this, at which point stationary ninja is replaced by chopping ninja. In fact it only takes about ten seconds to get the power meter up to

## NINJA MASTER

COMMODORE  
64/128  
FIREBIRD

Price:  
£1.99/cass

They're doing it on purpose. Software houses have picked up on my reputation for being ruthless on rubbish and, it seems, are intent on sending the worst dross they can dig up for me to tear to shreds in the pages of Commodore Users.

Well Firebird, you asked for it — here goes. Since I bought my 64, way back in Christmas 1983 (an early model) I must have played literally hundreds, possibly thousands of games. Some have been brilliant,

... then press fire to smash the wood — if you scream as you do it is more fun.

Shades of Doly Thompson here. Wiggle the stick like mad to build up strength...

The sword acts like a cricket bat to field off the spiky stars being lobbed at you by the enemy.

maximum, a three year old child manage it.

The blurb says "this is probably the hardest test to complete". Using your "trusty" elite sword, defend yourself against the deadly Shreeke stars. It is more difficult, but essentially the same as stage one, the graphics are crummy too.

In the final test, the now unrecognisable ninja must shoot cans of diet Pepsi from the air with a blowpipe. I got a crack in my neck just looking at him.

Some of the games in the Firebird Silver range are quite good. This isn't one of them. Don't buy it.

Ken McMahon

can be played using a joystick, or the keyboard, or, preferably neither. There are four stages to the game. In the first test you must defend yourself against flying arrows. There are four manoeuvres. You can punch, or kick, left, or right, depending on

**Anneka Rice — has  
absolutely nothing  
to do with this  
game.**

## Blockbusters

Central television's successful quiz show was one of the first of the Macosn quiz games. For those of you who have never watched it the gameplay goes something like this: The game board is a four by four matrix of hexagons. Each hexagon has its own letter on it. Each contestant must choose a hexagon and answer the corresponding question; the answer will obviously start with the letter on the hexagon.

The aim of the game is to get from one side of the board to the other, connecting the hexagons by answering the questions.

It is set out on the computer with each player using a letter as their "buzzer" which can be a real pain because when two players press their letters simultaneously one will appear on the buzzer and defeating is far from easy!

One of the better features of the

thing about the game is the little ditty of the Blockbusters theme tune you are treated to before the game. The programmers obviously need a lesson in debugging. A budget line £1.99 would have been a much more serious price tag. There is also a Blockbusters question master available. A wise idea for those of you unfortunate enough to own the original.

## Blockbusters Gold Run

How greedy can you get! Macosn have the nerve to charge the public another tenner for what should have been on the original.

Blockbusters Gold Run is the bonus part of the show where the contestants go for the big prizes. No big prizes here though just one big loss — your tenner!

The game is much the same as the original Blockbusters but each square has two or three letters on it with an answer the same number of words long.

Gold Run is much the same as the original but Macosn obviously noted the success of the questions and altered that. They have also put in a deflating facility (about time too!). All the same it still gets the thumbs down.

## Treasure Hunt

Now what you've all been waiting for, the chance to bawl a the back of a helicopter with Anneka Rice!

Treasure Hunt is Channel Four's

over the top game show in which two contestants guide Anneka Rice around the British Isles in a helicopter to find clues and eventually the treasure.

The game follows the show closely with everything but the out of breath Anneka Rice making an utter fool of herself. You must tell the helicopter where to fly in search of the next clue. There are ten clues to find and you are given the first clue at the start. When you are given a clue you should refer to the guide book you are given to find out what it means, then it's on to the map screen to tell your pilot (Anneka of course!) where to go.

Then it's off in search of the clue. But it's no pushover — the clues are virtually impossible to find. You also have to compete against a forty-five minute time limit. When you have completed the first treasure hunt, you may have a go at the next one which is set in a different part of England, and even people as hopeless as me are allowed to have a go at them.

If you like this game and manage to complete all three are other versions available with new treasure hunts on them.

Treasure Hunt is far superior to the rest of the games here and is also presented extremely well with good instructions and a guide book to help you.

When I played this I had to stop and double check it really was by Macosn. It's a must for fans of the show and perhaps it might appeal to the odd adventure fan in search of a new angle.

game is the 'load new questions' facility which is desperately needed as the questions are either aimed at three year olds or I'm the next Einstein.

The game is played on a 'teno limit'. The higher the level the harder the game. Sadly, because the TV game lacks the glossiness or tabloid hype of its competitors, Blockbusters is awful. The best

| Play Your     | Britannia       |       |
| Cards Right   | Software        | £9.95 |

## Play Your Cards Right

I hate this programme. I hate Bruce Forsyth. I hate this game. Bruce points that have to be made before I go any further.

For the people who are lucky enough to have never watched the show I will explain the rules. Nothing too complex here, you just have to predict whether the next card will be higher or lower than the one behind. Nothing for a pun though, fact is this game — Ed?

You may choose to play against the computer or a friend (if you can find one who will play this). The Winner is the first one to successfully predict six cards.

He will then go on to the bonus section in which he must predict some more cards and also bet on them. He starts with five hundred points and must try to reach two thousand. This is the only one of the games Macan did not produce and Britannia software seem to have done no better. Although there is nothing seriously wrong with this game I just knew it wouldn't work on the computer. Bad luck Bruce.

Third dart and you're nowhere near getting a tan.

## Countdown

Countdown returns us to the normal quality of the Macan range. Awful. This is taken from another "successful" Channel 4 show that's less outrageous than Treasure Hunt.

Countdown is a word game consisting of nine rounds. In round one the player chooses nine letters, vowels or consonants, the computer picks them at random and the players have thirty seconds to make the longest they can out of them. All this is O.K. until the end of the round when you enter your word, if the computer has not

got it in its dictionary it will then ask you "Is this a valid word?" and you respond by either pressing Y or N, meaning you enter just Y and hey presto, you've won the round. Rounds two and three are the same as the first.

Round four is the numbers round.

You must pick some numbers and the computer comes up with a total that you must reach by adding, subtracting, dividing or multiplying the numbers chosen.

Again all is well until the time is up then it's up to you to try and tell the computer how you managed to reach your total. Seeing as there isn't a multiplication or division key on the Commodore and the game doesn't supply one, this is difficult. Poor old Macan obviously haven't quite mastered the programming techniques.

After you have finished this depressing puzzle you are treated to a repeat of the last four rounds.

But don't fret, the ninth and final round is different — it's... it's...

... it's the Countdown conundrum. Can you unscramble a nine letter anagram before the thirty second clock runs out? Be careful! If you press too early and get it wrong your friend is treated to the rest of the thirty seconds.

Countdown is awful, you'd have a lot more fun (and money) if you just played on pen and paper. Don't take it even if it's offered to you for free.

## Bullseye

At last I reach the classic, Bullseye! Possibly the best of the worst, *The Price Is Right* it's composed by the brilliant Jim Bowen. "Oh, you're unemployed Bill. Smashing, lovely."

Bullseye like Countdown is set out in a number of rounds. Round

one, and it's Feedy up to the ockey. A special dashboard with ten sections is used for this round. Each section has its own subject which you choose to be quizzed on.

The player first chooses a subject and then tries to hit it, this is done by first aiming left or right and then choosing how much strength to put on the stick.

If the player hits his/her chosen subject they will then be awarded a bonus, this is higher the closer the dart came to the bullseye.

You will then be asked a question on the subject you hit and will be awarded points for a correct answer. However, should you answer incorrectly the question will

The player who is currently in the lead gets the chance to throw nine darts at a special bonus board. The board is made up of sixteen sections eight black and eight red. The player scores a bonus for each red segment hit, but nothing is gained when a black segment is hit.

Finally, if you are the player with the highest score Bullseye asks you if you would like to take a gamble. This involves hitting a hundred and one or more with just four darts! Success and your score is doubled! Fail and it is halved! Bullseye is not really awful but darts is just one of those games that will not work on computers.

As you may have noticed the Macan range and Britannia's *Play Your Cards Right* are all disasters. I would strongly advise against buying any of these other than *Treasure Hunt* and even that's nothing to shout about.

One of the problems is simply that the appeal of gold games is winning a prize. This is naturally impossible on a computer though a company did try it with 3.2.1 a

Smiling Jim Bowen — and a load of bull(s).

be handed over to your opponent.

The second round is more straightforward than the first, both players must throw three darts at a normal dashboard, the one with the highest score will then be awarded a general knowledge question. Get it right and the points are yours. Wrong and your opponent's is with a chance. This is also repeated three times.

Round three is where the lucky contestants stand for prizes. On your Commodore 128, it's only points.

wife back. They ran into problems because it constituted a lottery. Another thing missing is the computer. Much of the appeal of shows like *The Price Is Right* relies on the obvious slowness of Lesha Crowther. The 64 just can't compete.

It would be a good idea for Macan and Britannia to team up together and sell these games as a compilation for a taster, because as it stands now, the prices is definitely wrong!

## HYPERFORCE

C16 and Plus/4  
ARIOLASOFT

Price:  
£1.99/cass

**Screen  
Star**

A game like this turns up about as often as Helly's Comet. Hyperforce is that rare thing, a totally original idea, superbly programmed with excellent sound and graphics.

No platforms, no ladders, no nasty monsters, no treasure. Who needs them? In fact, Hyperforce is so different, it's not easy to describe, nothing to compare it with you see.

But it does have a familiar look about it. Jeff Minter circa 1994 I'd say. Someone out there obviously likes his style, which is, for those of you who don't know, sort of, well, weird.

Hyperforce is arcade action played at about three times the speed of light. You control the Startron, or at least half of it. The right half has been badly damaged so you must pick up pods with the operable left half.

Before your Startron pulse runs out you must remove a given number of pods, in the meantime the chamber walls are closing in on you. The walls absorb pods as they sweep over them, so you must hold them back either by firing at them or by dragging them back. The pods pop up all over the place though, so you have to be careful not to squash

Push back the walls whilst collecting the square pods.

them by dragging the walls back over them.

Each Startron has a limited lifespan or pulse in which to collect the required number of pods. As time wears the pulse can be extended by collecting 'lymers' which slow down the pulse counter. You have to keep one eye on the sub tracks, however, which have the opposite effect. They speed up the pulse counter, giving you less time to collect pods.

This isn't a game I would

Own I mention the graphics? Not really. Graphics so much as beads of colour — all over the place, lots of the colour knob right up to get the best effect, and the sound too. If you don't have a colour telly go and buy one, buy two and play them both at the same time.

Seriously though, this is a great game and if you don't buy it you're an utter utter utter utter (spit it out) — Ed! Well

Kan McMathew

Second screen — the walls form a triangular shape.

time and some keys are behind locked doors of a different colour. This is not a game for fools. Finding up in the wrong place with the wrong key can spell disaster.

As well as getting locked out, there are numerous other misfortunes that can befall young Jim. He can be cut down by a catless weevil ghost

that a cabin boy, and some of the treasure is a bit difficult to make out. I saw the Eiffel Tower amongst other things, and I'd been well clear of the rum all night.

There is also that annoying spruce overlap problem, where everything around a moving character disappears momentarily. But that's hardly a criticism as nobody seems to have noticed it yet.

None of this detracts from the game though, because the idea is a sound one and is fun to play. When the booty has been collected from all twenty screens you have 45 seconds

◀ The 'booty' litters the decks — gold, goblets, keys and cash.

## ● BOOTY ●

**C16 and Plus/4 FIREBIRD**

**Price: £1.99/cass**

Booty was released some time ago for the 64 on which it received a rather lukewarm reception. Firebird have deemed it worthy of conversion for the Commodore 16 and surprisingly it's not half bad.

You are Jim the Cabin Boy (eh?) For some strange reason the ship has been deserted and you are the only one left on board (bho). Cabin Boy's wages being what they are, you decide to search the Black Galleon's holds for the treasure which lies therein (heh).

There's rather a lot of treasure lying around in the Black Galleon, but it's not that easy to get hold of. For a start there are locked doors all over the place. To pass through these you must first collect the appropriate key, each door is a different colour and has a key to match.

You can hold only one key at a

▶ Look closely at the bottom of the screen and you can see that McMahan has only scored a pathetic 50.

plane, pecked to death by a parrot, swayed by rats — terrible things happen at sea.

The graphics are great and detailed at the same time. How so? Well, some of them are brilliant, like the porpoises with blue sea floating outside. Others are not so hot. Jim himself looks more like an astronaut

to locate the key which gives access to the next level.

For those of you who like the personal details, Booty was written by Kevin Moughton, a name I've seen before on Firebird Software, possibly Shark. Booty is a much better effort, more of this please Kevin.

## C16 and Plus/4 MASTERTRONIC

Price:  
£1.99/cass

"Go for it" says the  
Pocman-like thingy.  
"No thanks,  
Mastertronic!" says  
James Pickering.

No doubt you will have noticed that Mastertronic are making a killing with C16 and Plus/4 software, but I think they have gone off target a bit with this one.

Mastertronic describe this game as a grueling sports simulation that will use every ounce of your stamina and strength. Where they get that idea from I haven't a clue. Perhaps the person testing the game was a reject from Noel Edmond's Mr. Puuversa contest. I would describe the game as tedious and boring.

They also go on to say 'in the first three events — spinning, jogging and

jumping — you race against the clock (surprise, surprise) and in the fourth event — throwing — the record is the longest distance. Amazing.

The aim of the game, like any sport simulation is to compete in all the different events. Let me take you through all four of them. First there's the 200 metre sprint — continually running for 200 metres. That's followed by the 800 metres job — exactly the same as 200 metre sprint but obviously longer and called jogging. Thirdly, there's the long distance — a sort of steeplechase. In this event you must, whilst running, jump brick walls instead of hurdles. Last is throwing — instead of throwing a javelin or shot put, you must throw a brick. I wonder what Daley Thompson would think about that, pretend he is a football tooigan perhaps.

There are also two game variants, Game A and Game B. If you choose Game A you have to

compete in all four of the events, but if you choose Game B then you have the opportunity to choose an individual event to practice.

The most disappointing aspect of Street Olympics is that you can't use a joystick. The games does have joystick facilities but when you try to move it from left to right to gather speed you are disqualified. I've tried the joystick in both sports but was still disqualified. This meant that I was forced to use the keyboard, pressing Shift to gather speed and Return to jump. If there is one thing that really annoys me it's having to play games on the keyboard, and I think I'll go for the majority of us.

Worst of all the events are just plain dull. Run, run a bit faster, run even further still and chuck a brick. If you are looking for a good sport simulation don't look at Street Olympics.

# DROID ONE

## C16 and Plus/4 BUG-BYTE

Price:  
£4.95/cass

There's not a lot one can say about this game. At £4.95, it's bad news. The graphics and game play are similar to Axiom's Cybertron, collect the humans while mindlessly epping the robots. The action takes place on the planet Wagon IV, searching for the elusive OrPlatinum ore (so elusive there isn't any).

As you enter level one, robots appear from nowhere to attack your

ship. There are many different types of robots and they all behave in different ways. Some follow you around, others explode, showering you with shrapnel. You defend yourself with no more than rapid fire lasers and your wns.

Should things get really hairy, a tap on the spacebar activates a 'smart' bomb (I don't care what it looks like) that will destroy all the robots currently on the screen. Use them wisely, though, you only get three of them — suppose that's why they're called smart bombs.

Your ship is highly manoeuvrable and can move from one side of the screen to the other in just under three seconds. Not that that will help much, some of the robots move in for the kill just as swiftly.

Death brings no relief, the sound effects you get while and after ship is shoved onto the screen are dreadful and prolonged, it's almost a relief to get back into the game again. I've no doubt there are many people out there who will love mindless games like this, but, in my opinion, it's the pits. Although the graphics are reasonably well constructed and smoothly animated the game play is dreadful. Save yourself a liver, and try one of our free type-outs!

Fred Rand

Move, shoot, dodge,  
yawn, score points,  
fall asleep, Don't  
buy it.

## THE EXPLOITS OF FINGERS MALONE

### C16 and Plus/4 MASTER-TRONIC

Price:  
£1.99/cass

After just reviewing *Street Olympics* I thought *Exploits of Fingers Malone* might just be as bad or worse.

Fortunately, I was proved wrong and Mastertronic have shown once more that they can produce good quality games at a fraction of the price of the big software houses. *Fingers Malone* is back to their normal standard. It is a fast and frenetic platform game that boasts fifteen levels of sheer thrill power.

The aim of the game is to collect the keys to the safe, and the money that is left lying around the place. You must also turn the links as the floor from black to white (instead of

potholes you receive money). This is done by walking over the links but be very careful that you don't miss a link.

Seeds easy I know but as with all good platform games there are the extras. In this case Blekney, Spatley, Thugny and Wotat are constantly trying to stop you from collecting the loot.

To make things more difficult there they already see there are poles connecting each level. Some poles are for up and some are for down. If you are not careful you'll find yourself in a dead end and at the mercy of wastes.

Also on some of the platforms there are conveyor belts which move in two directions, left or right. When being chased by a enemy it could make the difference between life and death depending on which direction

the conveyor belt is moving. You need all you wits about you for this one. The old grey matter is working overtime just trying about it. But not to worry, help is on the way. To help you with your task they have installed lifts which you simply call by pressing a button. When travelling on a lift, but quicker and more complicated.

If after all this you have managed to collect the money and keys, and turned every single link in the floor from black to white, the safe can then be unlocked. Then it is possible to make your way to the exit, which takes you to level two entitled Dooney in the Dog House. This is similar to level one entitled 'Easy Does It', but quicker and more complicated.

If your kind of game is one that requires skill and fast reflexes and you have the capability to deal with another platform game, then this is the one for you. James Pickering

Mastertronic avoid taking the wooden spoon this month with *Fingers Malone*.

## BOMB JACK

### C16 and Plus/4 ELITE

Price:  
£9.95/cass

This Taitan one up has already done well for Elite on the 64 and the Spectrum. The 64 version is free but, Oh boy, this version is just playable!

The Jack who stars in the game is a sort of Super Mickey Mouse. Complete with cape and natty little red suit he flits around the different screens collecting piles of bombs left lying carelessly around.

But it's not just a case of collecting the bombs. One of them is

about to go off so you have to get this one fast. There another one will flash and so on. I found it easy on impossible to follow the sequence properly. You just don't have the control over Jack to get him safely onto the correct platform.

Needless to say there are several nasties in the game who try to stop you going about your business.

Jack flies through the air by pressing the fire button and pushing the stick forward. This will make a particularly big leap. But once he jumps reaches his highest point he will start to sink down again so you have to move him right or left to land on the platform with the next bomb on it.

Putting back on the joystick is supposed to make Jack fall back down at any point during a jump. At that's what it says in the instructions and that's also what happens in the real coin op. But in the C16 version — forget it!

There are also supposed to be floating coins that you can catch to freeze the nasties and enable you to run bones points as you charge around the screen unharmed!

I played the game for hours and didn't spot one bonus coin.

The game was converted to the C16 for Elite by a company called The Conversion Company. My advice to Elite is to convert to someone else quick. Avoid this one — there are better games to be had for much less of the folding stuff!

Egees Lucy

Bomb Jack bombs out on the C16.

# SAM FOX STRIP POKER

**COMMODORE  
64/128  
MARTECH**

**Price:  
£8.99/cass**

It has long been known that software houses will stoop to just about anything in pursuit of the proverbial buck, and a game like *Samantha Fox Strip Poker* just about typifies this sort of approach.

Take away the marketable name and you get a game of strip poker. Take away the gimmicks, which is simply a substitute for gambling, and you get poker. And as anyone who has ever played a few hands knows, poker without gambling is pointless. It's like doing the Australian pools for fun.

**Sam Fox down to her  
staring vest and she's  
still smiling.**

This brings us back to our Sam, the girl who'll do literally anything under the Sun. Page three model, popstar, celebrity and all round goodtime girl. I don't want to enter the great Sam debate because anyone who rides a tank into Wapping 'for a laugh' should get the contempt she deserves. So eyes down for a chance to see a few raspy digitised pictures. Hang on while I put on my mac.

The game loads in about ten seconds flat thus suggesting the amount of memory used in this complicated program. That or the programmer's a genius.

You begin with a picture of sizzling Sam who's resorted to the old trick of wrapping up in a few extra layers and a hat and scarf. You are given a couple of hundred points to begin with and dealt five cards. A round of betting ensues and you then have the opportunity to draw new cards to make up your best possible hand.

**Pair of Jacks takes  
the pot and it's coats  
off time.**

Another round of betting ensues and you finish off showing each other your hands with the result that you win or lose. If you win and get Sam down to zero she'll cast off a layer of clothing.

Unsurprisingly Sam's poker isn't too hot. In one hand I had three of a kind and felt confident Sam changed one card, suggesting she was either going for a inn or a flush, so how come when we turned over did she produce a hand that contained a jack, king, five, six and seven of different suits? A donkey could have played a hand better than that.

With a player of Sam's prowess it didn't take me long to make her get 'em off. Which can undoubtedly be the only appeal of this game.

Don't get too excited lads. There's only about four layers and the final

smutty conversation in the gents and for those people out there who buy the Sun because they think it's a good paper. You'll certainly see better quality pictures of bimbos in it (indeed, nude) which makes Martech's game pretty redundant.

**Mike Pattenden**

**Down to Zero — now  
you don't need to buy  
the game.**

product (for this is all the girl has become) is pretty weak. You don't get to see much, knowwhatmean?

This isn't the first strip poker game on the 64 US Gold's one was a flap (ha!) when it was released. So only Sam's name can save the game — another example of marketing for the sake of it.

*Sam Fox Strip Poker* is pathetic. It's the intellectual equivalent of a

# COMMODORE 64 CHART

## CHART CHAT

Imagine has done the double. *Green Beret* has stormed to the top of both the 64 and General Chart. And you read it here first.

The cheapo challenge is still holding up well with *Thrust* hanging in there at number two. Just goes to show what a Commodore User Cheapo of the Month can do for you.

Highest entry this month is *Nexus*, straight in at number 6 in the 64 chart. And *World Cup Carnival* is up there at number five despite *World Cup* overkill and the controversy about the game being a re-release of an old Artic title.

*Ghosts and Goblins* should come up the chart next month. Also look out for strong challenges in the C16 chart from Ariolasoft's *Hyperforce*, Frank Bruno's *Boxing*, and *Booty*. Don't miss it.

panel, give your creation a name and save it on disk. You could even build up a stock of different ones.

## The Photo Lab

Create your illustrations here using Clip Art graphics. Use them as a basis for your own illustration or start from scratch using a joystick and the drawing software. The usual facilities in clude box, line, circle, various line sizes and a set of fill patterns. When you're happy, select the 'camera' icon, take your shot and save it off to disk for future use.

## The Copy Desk

Here's where you start writing that scoop story. This section acts just like a normal wordprocessor, but it's all done in panels. So depending on what page

Chicago on the line, telex from Bahrain coming in, the presses are rolling and you're still holding the front page for the earthquake story. It's tough in the newspaper business. But you can forget Fleet St with Ariolasoft's *The Newsroom* — create and print a newspaper with your a Commodore 64.

# News

## The Newsroom reviewed

The Newsroom is a unique package for the Commodore 64/128. In a nutshell, it lets you create a newspaper, magazine or what you will, page by page. You design the banner, make the pictures, write the text and headlines and, miracle of miracles, the printer runs out a whole page at a time. It's all very impressive. Makes you wonder why Eddie Shek didn't buy a Commodore 64.

The obvious snag is that you need both a disk drive (the package is not available on cassette), a printer and £34.95. The price probably reflects its American origins. Springboard Software programmed it — Ariolasoft are merely distributing it in the UK.

The Newsroom is one of those easy to use menu and icon-driven programs, joystick or keyboard driven — you hardly need look at the instructions. The software consists of six sections that imitate the stages of newspaper production. There's also a two-sided Clip Art disk that contains hundreds of graphics for use in your 'photos'. Here's what the six sections do:

## The Banner

You've got to have a banner for your paper or mag, like 'The Daily Scooter' or 'Barry's BMX Bulletin' — here's where you do it. You have a choice of three large type fonts and two small ones and you can use any of the Clip Art graphics in whole or part. Arrange your text and artwork anywhere in the on-screen banner:

size you choose, you have either six, eight or ten text panels to fill. Three headline fonts are available as well as two text fonts. If you want a picture in a particular panel, call it up first from your disk and position it where you want in the panel. Your text will then automatically run round it.

**Take your photo, caption it, and save to disk for use in the Copydesk section.**

Commodore MPS 801 and 803, The Newsroom works with the Epson, Star, Okidata, Riteam and a whole lot more. Interfaces catered for are Xerox, Tymac, Greppler and the Cardco range

## Wireservice

If you've got a modem, you can receive or send complete pages, pics and panels over the phone (at 300 baud). Admittedly I didn't try this, but it's probably the least useful part of the package

## Layout

Here's where you decide how your page will look. You've already written and saved off your text panels (complete with any illustrations). The page size you've chosen appears on the screen divided into its panels. Simply arrange your page by inserting panel names into the appropriate

## On the Streets

So how does it all work out in practice? There's no doubt that you get spectacular results with The Newsroom. The facilities offered in terms of text fonts and illustrations and their flex-

A completed panel incorporating the headline, the story and a photo.

modular program, there's loads of entering and leaving of sections to do, each one involving lengthy disk access — and as we know the 1541 is oh so slow

remarkably forgiving when you insert the wrong disk. When you finally get to print your page out, you'll find it takes around four minutes — yaaa.

The Newsroom is a remarkably good package and a brilliant piece of programming. It's easy to use and gives spectacular results — there's simply nothing else like it around for the £4/128. But you'll need to spend lots of time with it.

# flash

by Bohdan Buciak

spaces on the on screen page. Then you can save the whole page off to disk

## The Press

Print out the whole page, or any panel, banner or picture individually (so you can see what they look like before going any further). Will your printer work? A huge range of printers and interfaces are supported. Apart from the

ability gives you lots of scope to make your work look lively and interesting — you'll be proud of your efforts when the press starts rolling

My main criticism is that alterations can't be made easily. You have to get the particular panel off disk, into the Copydisk or Photo section, alter the text or pic, save it back under a new name, go to Layout and substitute the panel, and then print it out. See what I mean?

And since The Newsroom is a

You're constantly swapping disks too, especially if you use a separate disk for banners, panels and pictures (the consolation is that Newsroom is

Choose from a range of fonts and drawing utilities.

A finished front page, takes ages to print but it's worth it.

## SCRIPT PLUS

Who says you can't do useful things with the C16 and Plus/4? All you need is some decent software, like a wordprocessor, to get you writing your next bestseller. So you'll be delighted that Script Plus is now available — and it works with both machines.

Script Plus is a cartridge-based wordprocessor which Commodore asked Precision Software to write specifically for the 16 and Plus/4. It looks and feels very much like EasyScript, which Precision wrote for the 64. Apparently, Commodore hasn't done much with Script Plus — which is funny because 16 and Plus/4 owners have been crying out for a decent wordprocessor. So Precision are selling it themselves, through their subsidiary Parsoft, at £19.95.

For the money, you're getting features you'd expect from more professional programs such as: search and replace, headers, footers, mailmerge, a calculator and a HELP function.

The Script Plus cartridge plugs into the C16 and Plus/4's expansion slot, and within seconds of power-up, you're ready to go. You will, of course, need a suitable printer and interface, and a cassette or disk drive. Script Plus works with both, unlike the wordprocessor built into the Plus/4.

At this point you will need to tell Script Plus about your printer and disk drive. Script Plus offers you a choice of five printer groups covering Commodore, Epson and Diablo compatible machines, so you are unlikely to have problems at that department.

You also get to choose the width of your text screen, anything from 40 to 240 columns. You still only see 40 columns on the screen at any time, but when set for 80 columns, you can scroll your 'window' across and down to see the whole page.

### Using Script Plus

Just like EasyScript, the top line of the screen is called the command line and tells you what Script Plus is doing, where the cursor is and displays error messages. The remaining 24 lines are for your text.

Script Plus makes full use of the machine's excellent screen editor. Using the cursor keys will get you around your document and the insert and delete keys will help you correct errors and erase small chunks of text. Script Plus automatically wraps the text making sure that words are not split over two lines, but you can turn this

Reverse asterisks are placed in front of text formatting instructions (top left of screen).

feature off at any time. The 'W' on the command line tells you when Script Plus is wordwrapping.

Insert mode is similarly indicated, and when turned on it automatically moves the text to the right of the cursor to make room for the character you have just typed. This is useful when you want to insert a word in a sentence, or even a whole sentence.

Moving around a long document with the cursor is tedious, so Script Plus allows you to zap from place to place quickly. If you know the approximate line number of the place you want 'ESG G' followed by the line number

will take you straight there. If you can remember an odd word that you used in a particular place, Script Plus will search through the text until it finds that word. Moving backwards and forwards through the text can be done by jumping to the next or last screenful, particularly useful for reading through your document prior to printing.

Lastly, 'panama' will scroll automatically across the whole width of the text, panning every 40 columns. A touch of the spacebar will give the scrolling and a touch of the Stop key will leave you back in edit mode. But the scrolling is rather too fast to read

Pressing HELP gives you a set of easy reference screens.

Script Plus comes as an easy to use plug-in cartridge

# tested

— I would have preferred a slightly slower scroll.

Manipulating blocks of text known in the trade as 'cut and paste' within your document is easy. First, though, you will need to define the block. ESC R lets you mark the block with the cursor. Now that's out of the way, you can insert the block in another part of the document. Alternatively you can erase the block (by careful use) or copy it all another place.

## Disc or Tape

Although Script Plus caters mainly for the disc user, cassette users are not left out. You can select either disc or tape from the setup menu which you can get back to at any time. Loading and saving files is pretty straightforward. Memos can be up to 16 characters long and of any convention you choose.

Other essential disk commands for searching and renaming files can be accessed while in DOS mode and you can also format, initialise and validate

a disc, absolutely essential. Script Plus has the ability to handle numbers and columns of figures as well as text, so your financial reports will always look neat and tidy. You can also call up the full memory calculator function to do calculations on the figures in the text.

If you wish to send out a lot of copies of your document, you might want to set up a database of names and addresses for inclusion at the top of each letter, or for printing address labels. This is all catered for by the mail merge function.

## Print it out

Printout can be either to printer or screen. The latter allows you to view the text as it will appear on the printed page, of all those reversed asterisks and paragraph markers. When printing, you can select a range of pages to print, or just a single page.

Script Plus allows you to embed printer commands in the text, so [providing your printer has the capability]

you can change fonts, underline and enlarge areas of text. A reversed one asterisk is used to indicate that the following character is a printer command. Additionally, you can use the reverse asterisk to set margins, page length etc, as well as justification and centring.

The manual is large, very comprehensive and is split into two sections. The first is a tutorial designed to familiarise you with things speedily and without fuss, while the second section is a very handy quick reference guide for use at any time. Alternatively, you can call up an off screen Help page at the touch of the appropriate function key.

Parasoft is so confident that Script Plus will sell well, it's running a 'Win an Amiga' competition for anyone buying the program.

## Conclusions

I can't find much to complain about in Script Plus and a lot to commend. Maybe the printer options

could have been wider, maybe you should be able to change the screen and text colour.

Overall, though, Script Plus contains the features you'd expect to find on any self-respecting word-processor. It's easy to use, has a good manual and a very useful Help screen. Moreover, it's cartridge based so you're up and running in no time. You won't find a better word-processor for the 18 and Plus4.

# TURBO ROM 64

There have been lots of attempted solutions to the speed problem presented by the 1541 disk drive. The most common are 'turbo cartridges', which tend to be expensive and bung up your expansion port. Turbo Rom is one of the new breed of 64 add-ons: it actually replaces the kernel chip in your 64 and 128 to provide faster loading and saving on disk and simplified DOS commands. In fact, it claims to increase speeds by up to six times.

## Installing Turbo-Rom

But before you can take advantage of those extra facilities, you'll have to toll up your sleeves and perform a minor operation on your 64. For most of you, installation won't present a problem (all you'll need is a screwdriver), but some older models will need the attention of a service engineer.

Allow me to explain. To fit Turbo-Rom, you will need to remove the existing kernel rom chip from its socket, and replace it with the Turbo Rom

chip. On some older 64s, the kernel chip is actually soldered in place and you will need to get a socket fitted before you can install Turbo Rom (estimated cost £5 to £20). Tackle the task yourself, and you could do a lot of damage.

Finally, you will need to drill a small hole in the case to take the switch, although you could leave it hanging out of the back if you don't fancy voiding your guarantee.

## In Use

Turbo Rom really does live up to expectations. The speed comparisons published in the manual are accurate, and I couldn't find any software that refused to load (although one or two didn't load any faster). If you do come across something that objects to Turbo Rom's presence, flip the switch, power up again and Turbo Rom disappears completely leaving your 64 as nature intended.

With Turbo Rom active, you'll find your disc drive a lot easier to talk to. Aside from the familiar DOS commands (preceded by a '@'), Turbo Rom

introduces three new Basic commands. ZAP effectively does a cold start, the same as typing SYS44736. If you flip the switch while the cold start is happening (you'll notice the screen shrink

**Turbo-ROM replaces your 64's kernel**

slightly). Turbo Rom will vanish. QLD will retrieve a Basic program automatically. NEWED, or after a cold start, and MDN will pass program control to a monitor program.

There's also an added advantage. Pressing F7 will produce a low res screen dump to a suitably connected printer, and typing '@p' does the same as typing

commands and facilities. Nice one, Cockroach!

# Printer Power

by Bohdan Buciak

With sleek and upmarket machines like the 128, the Commodore PCs and the Amiga, Commodore can no longer afford to produce grotty printers. So they've come up with the MPS 1000, a fast, sophisticated printer that should attract the more serious user.

Commodore may be good at producing computers but their reputation for printers has always been pretty dismal. That's all set to change with this new MPS 1000, a dot-matrix printer that speeds along at 100 characters per second, has a Near Letter Quality mode and features both Commodore and Centronics interfaces. And you get the lot for the miserable sum of £287 (including VAT).

But this isn't really a Commodore printer at all. In fact, it's an Epson LX80 with a few modifications and a 'Commodore' badge stuck on.

## Good Looks

The MPS 1000 has been designed to sit alongside the 128, the Commodore PCs and the Amiga. It's creamy in colour, sleek and feels robust. A detachable tractor feed comes as standard and so do two le-

terfaces located at the back, the serial one for the 64/128 and the Centronics for the PC and Amiga (both have built-in Centronics interfaces). The obvious advantage here is that you can use the MPS 1000 with just about any computer on the market.

Although slim, it's a fairly large machine and there's no way of stacking paper underneath it unless you buy a stand. There's a paper guide for feeding paper from the back and a plastic lid that covers the printhead and ribbon. This, supposedly, dampens its screeching sound but, as with most Epsons, you'll have to get your teeth and bear it.

The MPS 1000 design is at least one year old, and it shows. On the front panel you get the mode switches for on-line, form feed and line feed but there are no switches for changing from draft to NLO or for changing characters per inch. Instead you're furnished with a set of DIP switches located on the back panel. Manufacturer's line Steve and Citizen let you set

these printing options easily from the front. Why can't Commodore (sorry Epson)?

## Print modes

The MPS 1000 works in two modes — Commodore and IBM — which are also set by the rear and DIP switches. In Commodore mode, the MPS 1000 does all the things a Commodore printer can (and can't) do: it prints the complete character set, prints reverse text, but it won't let you underline or emphasise text.

Only in IBM mode do you get these facilities, together with a choice of three pitches: pica, elite and condensed. So to use them say, with your wordprocessor, you'd have to output from the user port to the printer's Centronics interface.

The DIP switches also set the two print modes. Draft mode lets you print bi-directionally at 100 characters per second. That's very fast by Commodore standards but unfortunately, not as fast as some other printers which claim the same speed.

The reason for this is the MPS

good geeky print.

NLO mode is also pretty essential if you want to produce listings that include Commodore graphic characters. In draft mode they look pretty dismal, but NLO brings them out sharp and well defined.

The manual is chunky and very good, and is split into clearly defined sections for Commodore and IBM modes. It gives the useful list of Escape codes and examples, in Basic, on how to use them. There's also a wealth of technical information for those of you who need to know about protocols like data transfer sequences (bless it me).

## Conclusions

The MPS 1000 is a surprisingly good printer by Commodore standards and a worthy companion to the 64/128, PC and Amiga. It's solidly built and looks as though it could chew away happily for a long, long time.

My only quip is that setting modes and other facilities is still being done with nasty DIP switches. There's no longer any excuse for this. Also, with Commodore and IBM modes to choose

This is the MPS 1000 printing in Near Letter Quality Mode.

ENLARGED PRINT

This is the MPS 1000 printing at 100 cps in Draft Mode.

IBM is reversed out (NLO)

1000's sluggishness when it comes to line feeds. No matter how fast the printhead travels it's still held up a little whilst the printer advances the paper to the next line. Despite that print quality in this mode is good even up to Epson's usual standards.

NLO mode is much slower, a damned 20 characters per second, because the printhead travels back across the line effectively printing it twice. But NLO is the MPS 1000's best feature: it produces solid and stylish characters that should impress anyone looking for

from, it takes some fiddling out what can and can't be done with them and in which mode your software will feel happiest. Still with a choice of interfaces and a little experimenting you should be able to do what you want.

# ESVAM MICRO DOS

## ALWAYS A STEP AHEAD

THE BEST IN  
BACKUP METHODS  
IS NOW EVEN BETTER  
NOW HANDLES PROGRAMS THAT LOAD SUBSEQUENT PARTS

### DOUBLER

The tape back-up 'double' has been an essential feature for all users of 5.25" floppy disks for years. Now, with the introduction of the new 3.5" floppy disk, users are looking for a way to back up their data. Double has been designed to meet this need. It is a very easy to use, powerful backup program. It can back up any type of software program, including the operating system. It can also back up individual files and directories. The software is the key to the success of the program. It is a very easy to use, powerful backup program. It can back up any type of software program, including the operating system. It can also back up individual files and directories. The software is the key to the success of the program.

### ALIGNMENT PROBLEMS?

1541 PHYSICAL EXAM  
C38.95

The program allows a 100% alignment check and adjustment when using the 1541 disk drive. It is a very easy to use, powerful backup program. It can back up any type of software program, including the operating system. It can also back up individual files and directories. The software is the key to the success of the program.

### NEW MK.III VERSION

Quickdisc+  
PARTICULARLY FAST SUPPORT

After enjoying considerable success since its release we have now made some improvements to 'QUICKDISC+' to maintain its position as the best value in the disk speed capability category. Part LOAD (new 5.7 latest normal speed). Works with majority of protected software. Can be switched in and out from the program. Part SAVE at 7 times normal speed. Part Format takes just 20 seconds. Part BACKUP copies an entire disk in just 10 minutes (not protected software).

Very Fast The Copier for selective file copying is much faster. Now handles files up to 248 blocks long. Improved DOS commands (DOS 5.1 makes for easy use of the disk). Improved file loading and display a directory without anything to load. Part LOAD C3.21 is very, very useful. Improves performance. Centronics interface software (all ports with CBM graphics capable) (requires user port controller card).

A RESET button is used. (We have found this to be a complete - if not necessary the use of this) NO MEMORY IS USED by this program. It is a totally transparent and simple, easy to use program. 128" and 1578" compatible in 84 mode. PLUS MANY MORE USEFUL FEATURES TO MAKE YOUR 1541 EVEN MORE FRIENDLY TO OPERATE.

ONLY £19.95

When ordering Quickdisc+ Commodore Horizon 1541-A MUST FOR EVERY 1541 OWNER

NOW EVEN FASTER

### DISC DISCTOR V5.0

Now the fourth generation of the country's leading disk copy program. It is a very easy to use, powerful backup program. It can back up any type of software program, including the operating system. It can also back up individual files and directories. The software is the key to the success of the program.

EVERSHAM 3 MINUTE NABLER is the latest version of the National Eversham NABLER, now boasting even more power and speed. With now copy even the most highly protected disks in 3 minutes. Handles the latest type of disk. The 'PARAMETER' option, this often involves the use of the 'PARAMETER' option, which allows the user to enter the program's name. It is a very easy to use, powerful backup program. It can back up any type of software program, including the operating system. It can also back up individual files and directories. The software is the key to the success of the program.

'DUAL DRIVE INHIBIT' allows the use of two drives to make even faster disk-ups. Also allows for device memory storage software so no hardware modification necessary.

'NOVA TRANSFER' will transfer to disk the latest Nova II and also includes routines to transfer. Summer Games II and Beach Head II, to disk.

'DISCOP' will transfer standard speed disk software to disk. 'TRANS COPY' allows you to save a hard disk software to your own disk.

'DOUBLE TRACK UP' is a very fast two drive back-up. As well as being a very fast two drive back-up, it also includes routines to transfer. Summer Games II and Beach Head II, to disk.

'DISCOP' will transfer standard speed disk software to disk. 'TRANS COPY' allows you to save a hard disk software to your own disk.

- TAPE TO TAPE
- DISK TO TAPE
- REGARD INDEPENDENT OF THE CARTRIDGE
- NOW HANDLES PROGRAMS THAT LOAD EXTRA PARTS
- PROGRAMS RESTART FROM THE POINT BUTTON IS PRESSED

OPERATING 'FREEZE FRAME' Freeze Frame is simply itself to use. It is cartridge based so is simply plugged into the cartridge port. When the cartridge is switched on a message is displayed. RETURN will clear the computer back to the normal start up screen. Software can now be loaded from tape or disk completely as normal. The latest version of 'Freeze Frame' will not test out of our knowledge. About ANY software to load and run normally (some computer products).

Freeze Frame can be brought into operation at any convenient point by pressing the button on it. You can then do one of three things - 1. Pressing 'D' will save a working version of the program in memory to a formatted disk. This version will include an auto loading very high speed reload (many programs reload in less than 30 sec).

2. Pressing 'E' will save to disk with a standard reload speed and can be used by most 1541/780 drives (i.e. space machines, etc., but perhaps more importantly by most fast load cartridges and systems. Use 'Dolphin DOS' to reload anything in less than 10 sec. (Also suitable for U.S. spec. machines).

3. Pressing 'T' will save a working version of the program in memory to tape. This incorporates a high speed reload at approx. 2400 blocks.

IT'S AS SIMPLE AS THAT ALL PROGRAMS SAVED WITH 'FREEZE FRAME' CAN BE RELOADED INDEPENDENTLY OF THE UTILITY

ONLY £39.95 Owners of earlier versions can return them and upgrade for £16.85.

SERIOUS WARNING: THIS IS AN EXTREMELY POWERFUL PRODUCT AND IS STRICTLY FOR PERSONAL USE. DON'T COMPARE IT WITH ANY OTHER PRODUCT, NOTHING ELSE OFFERS THE POWER OF 'FREEZE FRAME'.

# U.S. HOTLINE

## Chicago Show-time

Dan Gutman  
reports

Dan is not one to miss an event as spectacular as the Consumer Electronics Show. He flew down to Chicago to check it out exclusively for *Commodore User*, picking the most interesting and unusual exhibits, including Commodore's new 64C, on display for the first time.

At the June Consumer Electronics Show in Chicago, over 1,000 companies showed off new products that filled an area of no less than 28 football fields — makes your feet sore just thinking about it. Surprisingly, a large number of them are computer games, a category many people in the U.S. thought was dead. Here are some of the software companies working on things that caught my eye.

- **Activision:** New titles included *Hoover II*, *The Doomsday Papers*, and *Shogun* (a puzzle game derived from Mah Jongg). Activision has acquired the rights to the movies, *Labyrinth*, *Howard The Duck*, and *Alien*.
- **Avalon Hill:** Have you ever heard of sex therapist Dr. Ruth Westheimer? Well even if you haven't, here comes Dr. Ruth's *Game of Good Sex* on computer.
- **Bentley:** Mickey, Mami, Donald and Goofy go interactive with *Walt Disney Comic Strip Maker* and *Walt Disney Card & Party Shop*. You can create your own comics, stationery, and greeting cards showing all the popular Disney characters. Over 100 graphics are included (\$35).
- **BCI Software:** Shoot subliminal messages to your brain while you work at the computer. The first titles in their "Mind Over Matter" series are *Love Weight*, *Stop Smoking*, *Conquer Stress*, and *Be Successful* — probably not all at the same time.
- **Broderbund:** maker of *Print Shop*

(reviewed last month) now have *The Toy Shop* which lets you customize paper mechanical toys on your computer and print them out. Included are designs for a balloon powered jet dropper, catapult, sundial and 17 others.

- **Commodore:** you've all heard the Commodore 64 now has a cousin, the Commodore 64C. The new machine (\$200) is fully compatible and includes telecommunications software, a word processor, paint program, and GROS, a screen environment that makes the 64 act like a Macintosh.

- **Datasoft:** Crosscheck is a new crossword game for up to four players. The object is to build a continuous word chain from the centre of the board out to your "home" base (\$40). Also released: *221B Baker St.*, a Sherlock Holmes murder mystery.

- **Electronic Arts:** Now you can throw your own murder in your home. *Murder Party* will plan the murder and print out instructions, clues, and instructions for up to seven detective friends. Other new releases: *Chesterfield 2000*, *Amnesia*.

- **Epyx:** If you liked *Summer Games* and *Winter Games* (you can bet I did), here comes *World Games*. Eight more events, from log rolling to cliff diving. Other new titles: *Super Cycle*, *Championship Wrestling*, *World Karate Championship* (System 3's *International Karate*) and *The Movie Monster Game* (starting Godzilla).
- **First Star:** *Mad Magazine Spy* vs *Spy* returns with *Spy vs Spy III*, *Artic An-*

includes three "laughtrax levels" and six scratch 'n' sniff cards. Also announced was *Mountain*, a gothic adventure by Stu Galley.

- **Mindscape:** Computer games leap into the next generation with "Cinemaware". In our programs for Amiga, Atari ST, and Macintosh only. They simulate movies, with panning shots, tilt, closeup, and overall incredible graphics. Another terrific Mindscape release is *Comic Works*. Users can create professional quality comics and storyboards.

- **Sharedata:** Perhaps the oddest product of the show was "Z-Glove", a cotton glove with sensors in it that manipulate objects on the screen. So you can conduct an orchestra or play "air guitar," and actually manipulate the computer music. It's made for lefties and righties.

- **Simon & Schuster:** Cheers! *Hugh Johnson's Wine Cellar* contains 1,000 wines and helps you select the perfect wine for the perfect meal. It also organizes your personal wine collection and tells you the optimum drinking years for various wines.

- **Splatooner:** *The Scoop* is a murder mystery based on an Agatha Christie story and written by a member of the London Detection Club.

- **Springboard:** Another great idea. *Certificate Maker*. This program helps you create and print any of 200 personalized awards, diplomas, or licenses. You can make a "Community Service Award" for one person and a

Sexpert Doctor Ruth takes to the Commodore 64.

ties. First Star will also be coming out with *Comic Strip Maker* and *Scoutbook Construction Set*.

- **Geslari:** You can word process in French, Spanish, German, Italian, Greek, Hebrew, Russian or English with *Alexander* (\$245). Geslari also introduced *Prospart*, *Prompt* and *Question Master*, programs that help teachers prepare their foreign language lessons. See good, no?

- **Infocom:** Now a subsidiary of Activision, breaks tradition with *Leather Goddesses of Phobos*, their first interactive comedy novel. The program

"Party Animal" diploma for another (\$50).

- **Timeworks:** "Desk accessories" come to the Commodore 128. *Partner 128* puts your appointment on the screen for you. It comes on cartridge, so it doesn't eat up memory space.

Look for these to hit the market between this month and the end of the year. Or maybe the end of the decade. You can never tell in this industry. Who knows? Maybe one of these products will turn out to be the next electronic light bulb or phonograph. Catch ya next time!

# Ultima IV

## QUEST OF THE AVATAR

Prepare yourself for a grand adventure: *Ultima IV*,™ the ultimate in adventure games, is a challenge to your computer gaming skills. Lord British has produced a game to challenge, not only your physical and mental skills, but the true fabric of your character.

The evil of evil of Mercedes, Misses  
Fadima, have been venerated and  
throughout the lands of Brimstone,  
but in isolated pockets and in the  
in the heart of vain. A new age awaits  
the coming of one who can  
conquer evil on all fronts  
through the mastery of both  
magic and the use of force.  
Demons, dragons, and  
long-dead veterans still  
plague the countryside  
and must be  
destroyed. The only  
safe path of the  
Avatar will take her  
quest to the heart of  
evil.

survive and  
encourage  
only by  
strategic use of  
weapons and  
tactics. Earthly  
victories are  
meaningless  
impossible and  
lead to the final  
conflict, where the  
ultimate challenge –  
the self – awaits

There is, without a shadow of doubt, the ultimate XP thing: game  
 Dev has a game to let any developer like this one that is a  
 university of programming. If you truly buy one game this year, make

Game 11 is a great challenge and will take many months to complete.  
In return I would recommend the game to find information. Page 10

(As an example, I bought \$100 of the best quality playing cards I could find and my computer, in terms of sharpness and playability, the transmission value for money, if you don't have a sharp drive go out with something else and buy a Then buy a copy of the same my game. Computer

If the person appears to you when you were the disappointed one, then  
 he is of the good I have given mercy. (Carnalizing the)

COMMODORE 64 DISK £19.95  
Available soon Atari

# INTO THE VALLEY

## NINE PRINCES IN AMBER

Telarium

GrA

64/128

Price: £19.95/disk

Based on the books 'Nine Princes in Amber', and 'The Guns of Avalor', by leading American science fiction author Roger Zelazny, this game from Telarium gives you the identity of Corwin. You awake to find yourself with both legs in plaster on a hospital bed; an orderly is about to give you your regular jab of morphine with his hypo.

Despite your records showing both your legs are broken, they seem in remarkably good shape when you manage to get the plaster off — someone has labels uncracked you here, and that someone, it seems, is Evelyn.

Your memory has failed, and returning home to the address shown

on the chart is not easy. It is made difficult by the rather limited commands understood by this game. Described as a game of politics, negotiation, and alliances, perhaps too much emphasis has been put on

it all gets confusing  
— Evelyn is actually  
your sister Flora.

Go back in time with your sidekick Random.

words verbs like ALLY, ADMIT, DISAGREE, NOD, SHRUG, and not enough on a simple GO NORTH.

Leaving the hospital takes you to a street corner where you aimlessly wander about, in whatever direction you choose. You cannot hail a cab, nor find a subway. The answer, it

This is how you start,  
in bed with both legs  
in plaster.

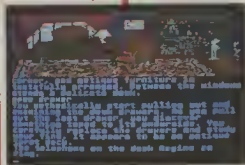

eventually become apparent, is to travel by bus, but you must GET BUS rather than CATCH one, only then to

before long you realise there are eight of you, all vying against one another, for the throne of Amber. And all the time, you seem powerless to do anything much except SMILE or SNARL, NEGOTIATE or PLACATE.

If you try to leave the room when the narrative doesn't want you, the text simply makes an excuse, and acts as if the command hadn't been entered. This is occasionally necessary in the best of scripts, to ensure you see an event, but in Amber, your freedom to manipulate events seems decidedly restricted.

Seddie's death is awaiting all too frequently, and the characters are

by Keith  
Campbell

Rummaging in the desk you discover the Tarot cards...

be told". YOU CATCH A BUS". For much of the play, you are guided through long stretches of narrative, with many actions assumed from one simple command.

The politics and alliances become when your memory starts to return, along the road at Evelyn's. She's really your sister, name of Flora, and she's sort of threatening you. Perhaps you should humour her? Soon, a brother contacts you, and

... with the faces of  
the protagonists in  
Amber.

# Go Back to when Time Stood Still.

## GEMSTONE WARRIOR

Put on the mantle of the brave warrior and descend into the Caverns of Horror! Your singular task is to rescue the Gemstone from the laithome creatures of the Netherworld. You will call on every ounce of courage and stamina as you fight your way through the treacherous labyrinth!

Gemstone Warrior is more than an exciting arcade game. It features real-time action, Hi-Res colour graphics and strategy. The Gemstone Warrior is a thinking being. Crossbows, fireballs and magic are only part of his arsenal. He carries one more weapon which sets him apart, WISDOM. You must provide his wisdom, we will provide the rest.

## QUESTRON

These are dire times for the Questron Empire. Mantor, a renegade sorcerer, has possession of the Great Book of Evil Magic and is using the despotic power it bestows upon him to plague the land with hideous monsters. The King's brave proud army has been decimated by these deadly foes and thus he has put his trust in you, a humble serf to use your cunning and strength to steal the Magic Book and render Mantor powerless. You will travel across many lands, find treasures along the way, but beware the deadly creatures that await you on your journey.

## PHANTASIE

When sorcery ruled and trolls and minotaurs still walked this Earth, a party of six intrepid adventurers set out to find the Nine Rings and use them to destroy the Dark Lord. This is your quest, your Phantasie. A multiple character role-playing game. Phantasie transports you to the medieval life of Gefnor for the adventure of your dreams. You'll map out new terrain, explore maze-like dungeons, solve puzzles, learn spells, gain experience and battle countless monsters. Beautiful Hi-Res colour graphics and a spell binding story line will suspend reality and launch you into a magical new world.

# HELPER VALLEY HELPLINE

This is where you get the help needed to get you started, solve a sticky mid-way problem, or reach that elusive goal of all adventures: "Congratulations! You have completed the adventure!"

The nature of monthly magazine production schedules means that we have no Helpline letters to get things going, yet.

So let me take the opportunity whilst space permits, of introducing our own Commodore User Helpline

team. We've got two expert and dedicated advertisers lined up to help with answering your problems. Already known to CU readers for their excellent tips on arcade strategy, Adrian Bott and Daniel Gilbert are looking forward to their involvement with The Valley Adventures as their true love in the world of computer gaming, and what they cut their teeth on.

Adrian, 18, won't be using juicy dragon steaks after he's played the

beasts. A vegetarian, he is just through his 'A' levels and awaiting results. He intends to take a 'year out' before going on to University.

Daniel, a school friend of Adrian's, is 17, and studying Maths, Physics and Chemistry for 'A' level. While having a session with The Pawn on one stand at the Commodore Show recently, he was described by Andre Sinclair as 'the best adventure player I have ever seen'.

Both natives of the village of Heathfield in East Sussex, Daniel and Adrian can't wait to get at your problems — and prove their advancing prowess!

Another character you will meet from time to time in the Valley, is Andy Moss, an inveterate sandwich eater. Andy will be bringing you some in-depth reviews, and probing into the latest events on the adventure scene.

## CAMPBELL'S COMMENT

"I want to buy a computer, and I don't know which to choose," is a question often put to me. People get steered in my direction, and they are dubious to avoid "He knows a bit about morses. Go and ask him!"

The first question I always ask is "Why do you want a computer?" This is a question to which very few people will give a direct answer. They will shuffle their weight nervously from one foot to another, not liking to say "I don't really know," embarrassed, perhaps, to admit they want it to play games, not sure if

Education, or "Computer literacy," sounds genuine.

To be fair, when I bought my first TRS-80 back in 1980, for a staggering £580, I hadn't a clue, either, as to what on earth I would do with the thing when I got it home. I just wanted one!

The next question is "How much do you want to spend?" An easier one this. To a man, the answer is always "as little as possible."

Of course, someone about to embark upon their first computer purchase, is unlikely to have heard of

Adventure, let alone played and got hooked on it. But adventure playing alone is reason enough, continuing as it does, wonderful entertainment value with material to exercise the brain in logical thinking. If adventure playing is a consideration in the decision, then there is little doubt that Commodore machines give access to the widest range of software possible.

The 64 forms the basis of this judgement. Let's look at what's available. For the basic kit of 64 and C2N at around £160, pretty nearly all the major cassette based adventures are available: The Questprobe series, most of Scott Adams' originals, Brian Howarth's Mysteries Adventures, the whole Level 9 range, Adventure Soft's Fighting Fantasy series, Melbourne House classics, and Mosaic's Bookworm, not to mention a whole collection of one-off titles from a multitude of sources.

The 64 is a good starter kit for the adventurer, then. But, once hooked on the wealth of software on cassette, it is simplicity itself, and not prohibitively expensive, to add a disk drive. Simply buy one and plug it on — no hassle with taking your micro into a dealer to have a drive or ROM controller chip fitted internally.

With a drive hooked up, a whole new world opens up. Who could resist Infocom's Interactive Fiction with some 18 titles to choose from? There is the Telarium series, which has classics like *Rendezvous With Rom*, *Fahrenheit 451*, and *Amoscow*.

There is a lot more adventure software from the States, available on disk, from companies like Activision and US Gold.

What other single micro can offer such a wealth of adventure games? If the 64 has been strongest on the adventure front for a couple of years, then we need not look much further to decide which is today's best buy.

There can only be one choice — the 128. Not only is there a 64 looking much older, ready to run the wealth of existing software — new adventures are now beginning to appear for the 128 in 128 mode. Infocom's Interactive Fiction Plus system produces games requiring a minimum memory of 128K to run — and the 128 is the lowest priced machine around that will accept the new format. Rainbow have come up with a separate 128 version for The Pawn, and future Mosaic Scaville titles promise to be big attractions.

"What computer shall I buy?" If it's Adventure you are after, make it a 128!

**Address your adventure clues and problems to me at Commodore User, Priory Court, 30-32, Farringham Lane, London EC1A 3AU. Mark your envelope with COMMODORE USER, so that the clue you need gets printed in the appropriate magazine!**

# INTO THE VALLEY

continued from p.69

no gold, I found myself carrying one magic spell, and one cleric spell.

My objective was to recover the treasure and retrieve the gold, slay my monsters as necessary, from the

ing elf and gauring experience of 263 points, I ventured further to find a chest full of 12042 gold pieces.

When a chest or a book appears, the player is given the option of opening it, opening it carefully, or leaving it. The choices seemed rather redundant, really. Of course a chest must be opened, and one would be foolish to do so without care. So imagine my annoyance when I was suddenly knocked out of the game with the message: 'You have been killed by an exploding chest!'

That is mainly what this game seems to consist of: the constant and repeated appearance of treasure, and monsters who look alike, but have an impressive range of evil-sounding names, as you control your passage through the corridors. With equal suddenness to death, gold will

▲ Open the chest and risk being blown to smithereens.

▲ Slay the monster with your sword.

dungeon. This consisted of a typical maze, rather after the style of the *Ayutim* maze (see *Into the Valley*, July 1986) with movement through it achieved in a similar way. The dungeon/maze is shown on the left of the screen, whilst status and attributes appeared on the right, and messages at the bottom. Action is in real time, however, and events can overtake you if you dabble between moves.

Moving forward by pressing the I key, I twisted and turned along the dusty lit passages of the maze. Soon I was challenged to a fight by a scar-

appear, only to disappear and be credited to my account so quickly that I had barely a chance to see what was happening.

Becoming a little bored, I left the computer alone for a while. A snail-like all appeared, and soon started to multiply. Eventually a startling total of 16 had built up. Wearily I returned to the keyboard, convinced I was about to be slaughtered, and greeted them. "Nice to meet you Supreme Haze's a Punk Poins for you," they said, and vanished. For all the good my virility had done me, I suppose little hares can come from taking the Punk Poins. See you in the next dungeon, dudes!

Neither pure adventure, true maze, nor real D&D, this is a rather disappointing game, especially bearing in mind its price.

## TRINITY

Activision/Infocom  
TA  
Amiga/128  
Price: £34.99/disk

It's a sunny afternoon, and on the last day of your package tour of England, you stroll around Hyde Park and Kensington Gardens. Ducks and swans share the waters of the Round Pond with toy boats launched by small boys. You wander around under the shade of the trees. There is an air of quiet as a little cleaning — a brass vandal attracts your attention, and you stroll over to have a closer look at the inscription on its base. Strange — there is something odd about it.

Out in the sunshine, Nazzies (or most of them) are pushing their prams, a small boy is plugged into his personal stereo, mistle on little else than the soapy bubbles he is blowing.

As occasional gust of wind disturbs the calm of the afternoon. You look at your watch, and suddenly everything clicks into place in your mind. You panic, running blindly towards Hyde Park.

Time freezes, and as it slows motion, you look up to see the unimaginable, a nuclear missile, descending as it in slow motion, inexorably towards the park. Yes, it's the Big One. How will you escape its deadly embrace?

You suddenly realise you are in a fictional world, and wipe the sweat from your brow. If this is a story, then read on — the author will get you out OK. But wait a minute — this is interactive fiction. In a sense, YOU are the author, so what will you do? Switch off the computer, break the nightmare by taking a stroll in the park? The Park? No, you will have to live this one out, get yourself and the world out of this mess.

Before the blinding flash, and the inevitable mushroom cloud, you see

▲ Idyllic Kensington Gardens belies the horrors to come.

the shimmering image of a mushroom. In its stem is an open door, and creatures of all sorts are pouring into it. You follow.

Through the mushroom door is a world of toadstools, a flat fantasy of dark, burnt-out images, a no hope existence where dank odours and dark images depress the mind. In the cemetery you study the inscription on a grave — and realise it's your own.

Within the toadstool world are the gateways to all previous explosions of nuclear bombs. The means to find them, and enter them, is all locked into a puzzle involving the watchdog you came across back in Kensington Gardens (remember), and a giant replica you discover in the fantasy

world.

Thoroughly researched, this is the first game from Infocom to feature real places, accurately reproduced in *Adventure's* format. These are the locations behind each of the doors. The fantasy world, however, is fictitious, and it is essential to draw an accurate map before you can hope to use the advantage gained by solving the first major puzzle. When you achieve this, a voice intones: "The Gnomon Conquest", and the game starts to open up.

The puzzles are all very logical, and the Gnomon puzzle in particular is cleverly implemented. You know what you want to do, but it's the mechanism for doing it that calls for some hard thinking. Score is out of

100, and points are awarded for completing certain actions, and obtaining key objects.

*Trinity* is the game that author, Brian Monrrey, wanted to write when he first became an Infocom storyteller. He started out with something less ambitious and a whole lot funnier — *Wishbringer*. *Trinity* is an entirely different kind of game. Although not lacking in humour, which is handled lightly, *Trinity* is basically a serious and philosophical game.

Using the experience he gained writing *Wishbringer*, Brian went on to produce this truly complex work. Taken together, the two games represent a versatility in style that demonstrates the remarkable talents of the author.

Written in the Interactive Fiction Fims format, (the only other title in the range is *A Mind Forever Voyaging*) to play *Trinity* you must have a computer with a minimum of 128K of

## NEWS

★ Two new titles along with *Trinity*, (reviewed here) were announced by Infocom at the Consumer Electronics Show in Chicago, in June.

*Moonmist* is a classic gothic mystery tale, set in a Cornish castle full of secret passages and ghosts. A treasure-oriented game, it is said to have more replay value than any previous Infocom games. The sex and favourite colour of the player is input at the start of the game, and the combination changes the puzzles, solutions, and endings. Written by Stu Gelley, this is an introductory level game.

From the keyboard of Steve Meier, sky comes *Leather Goddesses of Phobos*, a trash game in the worst possible taste, and classified as Sten-

dard Level. Based on a 1930's space opera scenario, *Leather Goddesses* features *Barbarella* and *Octopussy*, and can be played on any of three levels: Tame, Suggestive, or Lewd. Your potential reviewer is drooling over what level to go for when he gets his sticky paws on a copy... (Go on Ed. — let me review it on Lewd!)

★ Mosaic Publishing has commissioned The Ram Jam Corporation to write a twin-game package based on *Twice Shy*, the novel by Dick Francis. One game will be an adventure, the other a gambling game. Although playable independently of each other, there will be clues in each to help in the other game, says Mosaic's Vicky Ceme. *Twice Shy* is due in the autumn.

memory, so as far as Commodore machines are concerned, the 128 (in 128 mode) is the lowest in the range.

The game gets its title from the code name for the world's last atomic test in the Nevada Desert. It is here, at Los Alamos, where you eventually find yourself, half an hour before the test is due to begin.

# INTO THE VALLEY

# Play to WiN

**Tau Ceti** proved an instant hit with us when we saw it, so we put our top tipsters Daniel Gilbert and Adrian Bott onto the job of cracking it.

## GENERAL TIPS

Ten Cent is a very simple game if you tackle it properly; the first priority is to play with 2 players if possible — one on joystick, the other on keyboard. This not only gives you an advantage in combat, but enables you to cover for each other's mistakes (rather than dying repeatedly as you would if playing individually).

Secondly, save the game regularly — generally every time you feel you are 'getting somewhere'.

Using these techniques the game can be cracked in less than 10 hours work time — probably about 12 hours on the ship CPU.

## PLAY TIPS

When flying through a city watch the horizon very carefully and learn what different objects look like as they enlarge in 3D. Usually, small dots in the distance are enemy ships which should be lased. If a large number of ships are incoming then try to judge which are spear-hunters (see Object Guide) and laser these, using missiles on the others. Do not 'precipitate' (stay around and watch the missiles) — get on with killing superis; if you see the AMM message then just kill the others once you've finished the superis off.

If you find you are being tracked then start blasting the nearest hostile buildings — but you should do this anyway — as aliens tend to become rather more vicious once they know exactly where you are.

Don't bother using flares or flares to illuminate your way, other than in desperate combat, simply lend, wait 2 or 3 times (check status to see when morning has broken) and then take off again.

## BUILDINGS

Don't get too close to buildings other than sectors and bases, as they will start to shoot you.

NEVER fire on  
groundspheeres, they will  
start an attack known as  
'hosepiping' — for the way  
the lasers go crazy — which  
will kill you very quickly  
("Yee-hah just watch those  
shields go, boy").

**ALWAYS** destroy control towers on sight as these are capable of tracking missile and laser attacks.

Shoot at nearby tracking stations when the TRACKING alert is lit, but otherwise don't bother, as often there are too many to deal with.

Generally, feel free to blow away any building blocking your path, or which you would have to pass too close to, other than (obviously) a reactor or base. However, don't try to flatten cities as you will then have no landmarks by which to navigate.

Be careful when lighting in city centres not to hit reactors and bases as they will not let you in again. In the former case this tends to be fairly terminal, and this is DEFINITELY end-of game if you hit the Central Reactor.

When leaving a building  
be careful not to turn around

straight back into it, as can happen if you are ejected facing the opposite way to where you need to go, as you will leave at about half-speed and any collisions are slightly fatal.

## SHOOTING

When blasting remember that height is a crucial factor:

1) For long-range shots at only just-noticeable blobs of pixels, get as low as possible and only start shooting when the offending alien rises above the line of the horizon.

2) For Sandhoppers, increase to about 50% height to obtain maximum duration of shot.

3) For most types of  
sauces, elevate until you are  
shooting at the EXACT  
centre.

Use lasers in every situation other than in mass combat or close range. Missiles have a lower success rate than lasers against most targets.

As mentioned above, missiles are of use in mass combat when several may be sent to dispatch minor nasties while you concentrate on the supers. They should also be used at very short range when the enemy has no time to use AMM, but might jam you in

# TAU CETI

GROUNDSPHERE

CONTROL TOWER

MINOR SPHERE

MINOR FORTRESS

MINE

SUPER-NUNTER (OR 'SUPER')

TRACING STATION

## OBJECT GUIDE

the time it takes lasers to work

Be wary of mines as these can easily be mistaken for ships at long-distance and thus their range is wildly out. In twilight hours they can also be hard to spot.

### CITIES

The following cities do not contain any rods in their reactors so don't bother looking in them:

REEMA, ROON, BOTANIA

Here is a list of some of the military base cities: HEYROL, PREEMA, QUILBA, HAME, RUBIYA, RILENY, FROME, KULA, KZINTI

### NOTE ON GAME

It appears that C.R.L. (Craftily Recycled Looper) have cocked it up yet again. Once all 40 reactor pieces were collected, they were duly assembled. Or rather 38 of them were, because the last 2 were different colours and had no common colour — no matter how much the colours were changed they would not match. They matched exactly graphically, but, alas, as their colour did not coincide there was no match. This means the game is impossible to complete.

After 10 hours solid work into the very small hours of the morning, this was not well received amongst the workers. A revolution

ensued, chaos ruled and the world fell into decline. Well, we thought about it, anyway

This follows a growing trend amongst some software houses to tell players by resorting to dirty tricks, especially on review copies

It would be widely appreciated if software houses would actually playtest their production copies more thoroughly, we would be willing to oblige for a small fee

Here's a few quickies for you . . .

### Kung Fu Master

On level one of Kung Fu Master face Joff, press shiftlock and G to get a gun. Press fire to shoot it. Don't hold it without moving for too long.

Blake Woodhouse,  
Duffield, Derbyshire

### Dropzone

Here's a few tips that will enable you to achieve scores over 100,000 in the brilliant Dropzone

1. Always carry a human with you because this makes things less hectic
2. Store your bombs for the trailer invasion.
3. When you have a hymn on your tail go into a circular motion, lining all the time to dispose of him.

Kirk Rutter,  
Dagenham, Essex

### C16 Commando

Are you tired of rushing about in Commando? If so, then these pokes will enable you to walk right up to a soldier and blast him. If he doesn't disappear then just keep blasting him until your man charges onto the next screen.

1. Load 'Commando' as instructed.

2. Reset computer

3. Type in

POKE 11495, 185 (Return)

POKE 12707, 185 (Return)

SYS 4109 (Return)

### C16 Sky Hawk

For extra lives (about 200).

1. Load Sky Hawk as instructed

2. Reset computer.

3. Type:

POKE 7811, 255 (Return)

SYS 4179 (Return)

# Play to Win

You have to be quick to be successful in the mapping business. A lesson that Adrian and Thomas Bott know only too well. They went without sleep to ensure that their *Shogun* map would be the first one published — another scoop for Play to Win. Additional wisdom from Daniel 'Grasshopper' Gilbert.

*Your tips are now flying in thick and fast, isn't it about time you sent some in yourself. Remember, you can win the game of your choice (up to £10) for original hints tips, maps and pokes.*

## Ghosts and Goblins

### The Weapons

Zombies, Forest Dwellers, and the little Goblins on Level Two all carry 'pots' at different times in the game. Killing the monster with the pot will either produce a different weapon, or a piece of armour (see 'Armour'). There are five different weapons, each with its own advantage and disadvantages.

- **Lances** are easy to target but not that powerful
- **Torches** are the second type of weapon you will come across. They're very powerful and will kill off a monster with just a few shots. Difficult to target though, since it flies down when thrown. But it will burn on for a split second after falling to the floor — killing anything that walks into it
- **Daggers** easily targeted and thrown — very effective weapons.
- **Axes** — No no's. They fly down like torches and wouldn't knock the skin off nice pudding.
- **Shields** The last weapon you will get and the best. Deadly against practically everything except 'Ogres'.

### Hazards

- **Zombies** can be killed with just one blow from any weapon. Get out of the way once you've done it though — as they have a habit of rising from the dead.

- **Owls** — again just one shot but harder to hit.
- **Venomous plants** only have one 'spit' for the screen they are on at any given time. So hop over this and go in for the kill
- **Devils** are tricky, there's no two ways about it. Takes about two to six hits to kill them depending on what weapon you are carrying. Try to make as many direct hits whilst it is flying up and down the screen (it always does this prior to attacking) but remember only one of your weapons can be on screen at any given time.
- **Forest Elves** can be seen off with just one hit. Make contact or you will end up in the water.
- **Forest Birds** will drop lances on you but can be killed by jumping up and shooting them.
- **Gremlins** (appearing in town windows) Can be killed easily as they appear at their windows. If you don't get them at the windows they will descend and run along the floor towards you. In this event kneel and shoot.
- **Goblins** are nasty little brutes. Shoot them at all levels to kill.
- **Spiders** — no sweat, one shot will do the trick.
- **The Gate Keeper** — you will need to get up close to this monster and fire like mad. Don't be afraid of touching him (he can only kill you with his missiles) so get in there and fight it out.
- **Ogres** — wait till they get up close and let fly. Watch out for them dropping things on you from above and their horizontal fire.

### Hazards

Water is deadly whether you are wearing your armour or not. So stay out of it and watch out for creatures trying to push you in.

Fire is not fatal but it can take your armour away. If this happens pick up the pieces dropped by the Zombies to restore your armour. Sometimes you can even jump over the flames if they are just beginning to die down.

*Anord Agyanial  
Rushden, Northants*

## Max Headroom

Here's a cheat guide to the LCD display codes. There's also a few useful points to bear in mind:

- Get control of all the floors beforehand so you can recover in an office should you get chased
  - Joystick control is tricky as you naturally push up to go but instead find yourself moving left. The quick answer to this is to turn the stick 90° anti-clockwise
  - All floors are identical so making a map is easy. These are the connectors you need to touch:
- Maxwell Robinson,  
Northampton.*

# SHOGUN

## FIRST PRIORITIES

Get the Buddha from the Temple of the Buddha as early as possible. Priest Yamaha or Priestess Suzuki will very probably pick up the Buddha at some point if you don't and may then lose or give it to another character, making it very hard to retrieve.

## ENDING THE GAME

Once you have 20 followers you will be given orders from the Buddha to take the scroll, mirror and buddha to the Night Buddha's shrine. The scroll is in the Tunnel of Love, but you will need a rose to enter. The mirror is in the Zen Master's palace, this time needing a book to

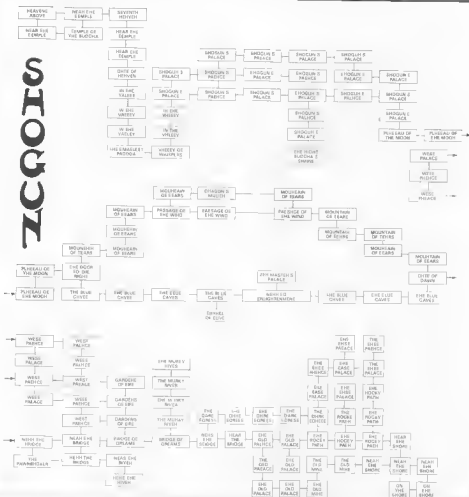

get in. The Buddha is found  
as described above.

## GENERAL GAME PLAY

News, like many other 'features' in the game is generally irrelevant — if you want to read it you will only slow the game down. The sword WILL increase your fighting ability quite significantly, but all other objects (other than those described above) are purely

trading/bribing items. The only order which seems to be effective is the "protect" command. This is an effective way of killing people — get a Samurai to protect you and then attack the person concerned. Followers tend to gradually lose their loyalty — even though your followers number may not decrease they will no longer walk around after you. They also seem to be terrible at carrying out orders once off screen.

# Uncle Jim's Commodore Club

## Way of the exploding fish

**M**y nephew and niece have four pet goldfish in their garden pond, and the other day they asked me whether I could write a computer program for telling them apart. Apparently they want to give the fish names.

It took me ages to work out how to achieve this, but in the end it dawned on me that since all goldfish look alike anyway, it didn't really matter what results the program gave — they could never be proved!

The next day, I set my 64 up beside the pond, and proudly unveiled F.I.N. — Fish Identifier and Namer. As Denise and Trevor sceptically looked on, I ran the program and in a twinkling the results flashed up on the screen:

THE FISH ON THE LEFT IS RODNEY.  
THE FISH ON THE RIGHT IS MAVIS.  
THE FISH IN THE MIDDLE IS CAROLINE.

THE OTHER ONE IS HENRY.  
"Pretty impressive, huh?" I asked.

"Okay," said Trevor. "The fish have moved around a bit now. Let's run the program again."

Good old Trevor, he'd found the fatal weakness in my software — it always gave the same result, so if I ran it again he'd know it was bogus. I just couldn't attend the thought of him proving me wrong and

gloating, so thinking quickly I shouted, "Whoops! Silly me!" and chucked the computer into the pond.

Unfortunately the rest of my gear, including the television which was still attached to the computer, followed it into the drink.

It's not been a happy month for Uncle Jim. Trevor and Denise aren't talking to him because of the Exploding Fish incident. But he's come through it all, ready to explain to you all the wonderful mysteries of computing.

The result of all this electrical equipment being immersed was spectacular: not only did it blow the main fuse in the house, but it also electrocuted the goldfish, thus neatly solving the problem of telling them apart once and for all.

Trevor and Denise aren't talking to me any more, even though I tried to cheer them up with a merry quip about fried fish and microchips. What gratitude! They'd only have been eaten.

## Expert guide to RS232 Interfaces

The RS232 is the world's most versatile interface. You

can plug it in to almost anything. Mine is hooked up frequently to the Hoover. A little program I wrote will send the thing right around the living room.

The RS232 really is the common cold of interfaces. Everyone has got, had, or

will have one at some time. The trouble with it is that nobody really understands how it works.

Ask most people and they are likely to tell you it's a one-off model from Ford with fluffly dice fitted as standard.

Really it's all very simple and straightforward. I have one which I use, with a few adaptations, to connect with my microwave. A few taps on the keyboard and I can have a Birdseye ovenroast done in no time.

There are a number of technical terms that need explaining before you can get the most out of your RS232 and I'm going to explain them simply for you. Any other chance like this would cost you several pints of lager and a curry from the user club knowell so take note.

**Beudrate:** this is a unit of measurement used to

calculate the time it takes you to doze off when listening to anyone discuss interfaces. Fifteen minutes is about average.

**Handshaking:** a term used to describe the motion you get when the club interface is passed from one member to another.

**Async:** tricky one this. It's an abbreviation used to describe the kind of person who buys every useless attachment available for his micro. It's short for "He's connected everything but async to his 64".

**Parity:** something you go to with jolly, and ice creams and a funny hat.

**Stop bits:** these are heavy items of outdated equipment that can be put to another use. Propping open the door for example.

Well I hope that makes things clearer for all you RS232 owners out there

## Sarcasm generator

Having seen last month's excellent Insult Construction Set by Fred Reid in the mag, I decided it was about time I let you in on my Sarcasm Generator, a little program I wrote, oh, ages ago.

It didn't take me long to come up with the material. Since all you have to do when you're being sarcastic is to place a certain emphasis on a word, I wrote a program which would underline an appropriate word at random in any given sentence. For instance you could say to a Spectrum owner "My, your computer has a very nice keyboard, hasn't it?" You could put your geography teacher down by saying: "Please sir, isn't geography a jolly interesting subject?"

There you go, the wit of sarcasm ready and waiting for your fingertips. Pretty useful, eh?

# NEXT

## September Special

Our September Special is guaranteed to banish any post-summer blues and make you look forward to those cozy nights by the fireside — just you and your computer.

### Pokerama

Make your machine do weird and wonderful things with our latest collection of pokes.

### Personal Computer World Show

This event has now become Europe's premier home computer show. This year it's going to be bigger than ever. As well as all the latest games and new computers Commodore User will also have a stand. For those of you who can't make it we will have a full preview next month — rounding up the best of what's going to be shown before the curtain goes up on September 7.

### Screen Scene

The PCW will be the launch pad for dozens of new games. That means while you lot are slapping on the sun tan oil, and sipping cool drinks, the G-Force will be busy getting their hands on some of the likely show stoppers: Infiltrator (Previewed this month), Elite's new budget range, Mission AD, Deactivator, Split Personalities, bad boy Bolham's C16 cricket game, Ghosts and Goblins for the C16 all the cheepos.

### Into the Valley

Keith Campbell brings you up to date on the adventure scene. More news on C64 Pawn, a trilogy from Level 9, two new cheepo adventures plus a super and top secret competition.

### Charts

We've re-jigged the charts page for you, added a Cheepo chart, more Chart Chat, and a competition too. Can't be bad, eh?

### Play to Win

Now established as the best games players strategy column in the business. Under the microscope this month are Ghosts 'n Goblins, Way of the Tiger, and a Manc Miner survival guide for the C16. There is also a chance for you to earn some holiday money by sending in original hints, tips, maps, and pokes. So get cracking but remember they must be original.

### Type-Ins

If you can't afford the latest block-buster try typing in one of our great listings. All this plus our regular round up of new personal productivity software and add-ons in Business, the best technical help desk in Tommy's Tips, our T-Shirt winning lively Letters page is now bigger than ever, and Buzz will have all the news. Be in your newsagents on 25th of August, have a mere one pound in your pocket and all this can be yours.

# CASTLE

for the Commodore 64/128

Yet another super game from the talented Sandy Munro. Funny scenario this one: your intergalactic fuel transporter is caught in a medieval castle (don't ask me why). It must pick up fuel pods whilst avoiding the ghosts and ghouls that lurk around. Three great screens of joystick-controlled action. Move joystick left and right, and press fire for upward thrust.

**EASY  
ENTER**

First Screen — pretty simple.

```

See [Sandy Shamon](#)[illegible]

A screenshot of the Atari 2600 game "Lives". The game is presented in a top-down perspective within a rectangular frame. The play area is a maze-like environment with a grid of walls. A small, light-colored character is positioned in the lower-left quadrant. A larger, darker, more complex shape representing a monster or enemy is located in the upper-middle section. Several diamond-shaped icons are scattered throughout the maze, likely representing power-ups or collectibles. The text "LIVES" is displayed in the upper right corner, and "901" is shown below it. In the bottom right corner, the text "ATARI" is visible. The overall aesthetic is pixelated and characteristic of early 1980s video games.

# Strawberry

## ● for the C16 and Plus/4 by Frank Bingley

What, more summer strawberries? Simply try to munch them all without getting trapped by the snake. The snake won't eat you, it just wants to trap you. You must also avoid the snake pills and lure the snake into eating them instead of chasing you. You'll need your joystick plugged into port 2.

```

# EASY ENTER

Our New Easy Enter system makes program entering even simpler. It works like this:

Control codes appear in plain English (always inside brackets). Just look them up in the list below. For example, (DOWN) means: press the cursor down key. We've included the graphic itself in the table so that you can check you've got it right.

Actual graphic characters are not changed and appear as they do on screen - you'll find them all printed on your keyboard.

## Control Codes

|         |                              |              |
|---------|------------------------------|--------------|
| (UP)    | press cursor up key          | ↑            |
| (DOWN)  | press cursor down key        | ↓            |
| (LEFT)  | press cursor left key        | ←            |
| (RIGHT) | press cursor right key       | →            |
| (HOME)  | press HOME key               | ⌵            |
| (CLR)   | press SHIFT/HOME             | ⌵            |
| (INST)  | press SHIFT/DELETE           | ⌵            |
| (RVS)   | reverse on                   | ↔            |
| (OFF)   | reverse off                  | ↔            |
| (F1)etc | press function key indicated | F1, F2, etc. |
| (+130)  | flash on (16 and Plus/4)     | ⬇            |
| (-132)  | flash off (16 and Plus 4)    | ⬆            |

## Colour Codes

|        |                  |   |
|--------|------------------|---|
| (BLK)  | press CTRL and 1 | ■ |
| (WHT)  | press CTRL and 2 | □ |
| (RED)  | press CTRL and 3 | ■ |
| (CYN)  | press CTRL and 4 | ■ |
| (PUR)  | press CTRL and 5 | ■ |
| (GRN)  | press CTRL and 6 | ■ |
| (BLU)  | press CTRL and 7 | ■ |
| (YEL)  | press CTRL and 8 | ■ |
| (ORNG) | press CBM and 1  | ■ |
| (BRN)  | press CBM and 2  | ■ |
| (LRED) | press CBM and 3  | ■ |
| (GRY1) | press CBM and 4  | ■ |
| (GRY2) | press CBM and 5  | ■ |
| (LGRN) | press CBM and 6  | ■ |
| (LBLU) | press CBM and 7  | ■ |
| (GRY3) | press CBM and 8  | ■ |

Note: secondary colours on the 16 and Plus/4 are slightly different to the above.

# EXPLORE THE EXCITING WORLD OF COMPUTER GRAPHICS WITH THE UNIQUE LOW COST

# GRAFPAD 2

## The Ultimate in graphic input devices for the Commodore CBM64 micro

Grappad 2 is the first low-cost graphic tablet to expand the boundaries of computer graphics for the home, business and educational user. The scope of this unique product is only limited by the imagination of the user. Create your own Games, Graphics, Illustrations, Pattern Designs, Plans, Circuit Diagrams etc. in high resolution colour. With full instructions, the Grappad 2 is an extremely easy product to master.

- Near A4 size drawing area
- High resolution colour
- Home, educational and business use
- Variety of optional programmes
- FREE ICON DRAWING SOFTWARE WITH EACH GRAFPAD 2

# £59.50

INC VAT

### Applications include:

- Option Selection • C.A.D.
- Form Input • PCB Design
- Data Collection • Education
- Picture Creation • Picture retrieval • Games
- Construction Design
- Logic Design

Available from most Computer Dealers or direct from Grafpads Ltd

**Timeworks software lets you produce spectacular 3-D graphics.**

and adjust more text so a line is just less the line get longer and longer, you then have to use the 'format text' command to restore the correct line lengths.

You also have to set things like page widths, left margin, page breaks etc, by means of a 'check mark' followed by a command string which has the effect of breaking up the document as necessary. Despite this, newcomers to WP will find it simple to use which is what really matters.

There are full search, copy, move and delete options and the final printed letter can include condensed script, sub and superscripts, headers, footers and mail merge facilities. Documents can be chained together so that there is virtually no limit to the length of documents that can be created.

For those whose spelling is less than

# Complete

At last, the Timeworks suite of business programs for the 128 has reached the UK — and we're first to review them. The four packages — **Word Writer**, **Swiftcalc**, **Data Manager** and **Sideways** — combine to produce a total yet inexpensive system, and they've been customised for the UK market.

**Include spreadsheet data in Word Writer.**

## Timeworks 128

## Business Software reviewed

There are four programs in the Timeworks series for the 128: **Word Writer**, **Swiftcalc**, **Data Manager** and **Sideways**. Included with the **Word Writer** program is a spelling checker with an 85,000 word dictionary, while the database has a built in report writer.

The data from one program can be used in the others, so that part of the spreadsheet can be included in a letter or document and information from the database can be placed in the spreadsheet without having to re-type it.

The result is a completely integrated system which is so versatile that there is little a small business could not achieve with it.

All the programs use the 80-column screen, so it is essential that you have a hi-res monitor to the RGB output of the 128. The programs are all available separately at a cost of £57.50 each for the three main ones and £34.50 for **Sideways**. They've also been subsidised so you won't see any sloppy dollar signs or Zipcodes instead of postcodes — a welcome change.

The whole suite makes extensive use of windows and pull-down menus. While not unique in this, it is well done and there are several help screens in case you ever get stuck for a command. The result is that you rarely have to refer back to the manual since 90% of the answers can be found on-screen.

Although the manuals are helpful to get much use after the first few sessions, they are well laid out and include sections on how to set up the programs for your particular printer. Combine that with the example files that are supplied with each disk and a free telephone 'helpdesk' for anyone who has any problems and a beginner just can't go wrong.

## Word Writer

This is a professional wordprocessing package with all the facilities that one could ask for, especially at this price. It does highlighting, redlining and strikes on the screen, as well as the printer, assuming of course that you have a printer capable of printing them. It has full word-wrap and the page can be set wider than the screen in which case it scrolls the screen across the page.

Having said that, however, it seems a curious mixture of pre-set post formatting. If you type normally it will format as you type, but if you go back

perfect (and typeset as well) the spelling checker is excellent value. Select from a pull down menu and after a few minutes (depending on the size of the document) you are ready to correct your mistakes. A nice touch is that if you aren't sure where the spelling should be the dictionary will search through and find the word you want end display it, a single keystroke then replaces the correct word in the document. If the word isn't in the dictionary then you can add up to 1,000 words of your own in a sub-dictionary. A further facility is the built-in

| Category | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec | Total |
|----------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-------|
| SALES    | 100 | 120 | 150 | 180 | 200 | 220 | 250 | 280 | 300 | 320 | 350 | 380 | 2800  |
| EXPENSES | 80  | 90  | 100 | 110 | 120 | 130 | 140 | 150 | 160 | 170 | 180 | 190 | 1400  |
| PROFIT   | 20  | 30  | 50  | 70  | 80  | 90  | 110 | 130 | 140 | 150 | 170 | 190 | 1400  |

**Swiftcalc — very powerful and easy to use.**

Whilst, while perfectly adequate, had some funny little quirks which could easily have been avoided.

Having said that, Data Manager still great very good facilities and the search options are particularly good. There are a wide range of search criteria and it will search for a string within a string although wild cards as such are not allowed. You can then do second and subsequent searches to whittle the number of matches down even further.

## Sideways

This is an ideal program for all those who have struggled with spreadsheet etc to create a spreadsheet which is wide

calculator; this can be called up on screen and used to work out the results of sums and the result placed anywhere in the document. Although the overall package is not quite up to the standard of say, *Viralife Classic*, it comes fairly close, with the advan-

tage of integration and price it has to be good value.

**Right and below — Super Graphics option in Swiftcalc lets you print graphs and charts.**

enough to see all at once. Most spreadsheets print across the width of the page, then jump the next page to print more columns.

Sideways turns the entire spreadsheet through 90 degrees and prints down the length of the paper. With fanfold paper, there is therefore no limit to the width of the spreadsheet.

The stand alone version will work with a large number of commercial spreadsheets such as Multiplan or Practical as any other program that produces an ASCII data file. Swiftcalc includes its own version of Sideways, but this will not work with any other spreadsheet.

## Summary

The fact that Timworks have gone to the trouble of engineering the programs and that they are simple and easy to use, will mean that they will have a wide appeal to those who want to use them. 128 bit serious business. Although there are better programs on the market they are all more expensive and at £172.50 for the complete suite, Timworks are offering good value for money.

by Chris Durham

tags of integration and price it has to be good value.

## Swiftcalc

This is probably one of the best spreadsheets I have seen for the 128. It has a total of 250 rows by 250 columns and includes a whole host of mathematical and algebraic functions including trig functions, logs and complex IF...THEN...ELSE expressions. There are commands for calculating the value of an annuity (current and future) as well as investment interest. Formulas can be placed in a cell to allow "What if" calculations and totals, with the formula being up to 240 characters long.

There is an option to freeze cells, either by row or column so that as you scroll through the spreadsheet, those cells remain on screen. In a similar way cells can be "locked" so that the contents cannot be accidentally overwritten.

A recent addition to Swiftcalc is the "Super Graphics" module, which allows the printing of graphs and pie charts. These include 3D Bar charts, scatter diagrams, line graphs and exploded pie charts, all of which can be displayed on screen as well as being dumped to the printer.

A final excellent option is the "Quick entry" system for headings etc. If you want months as headings then just

## Data Manager

This is without doubt the weakest of the three main programs. The record creation facilities are good, the search options are powerful and it uses the same basic methods of control as the other programs, but somehow the person who wrote this one didn't get it quite right.

There are a number of nagging problems which detract from the facilities. For example, every time you use the printer you have to tell the program whether it uses ASCII, whether it needs a linefeed etc, all of which is totally unnecessary after the first occasion. Likewise, I found the Report

There are statistical and graphical options, but the latter is not up to the standard of Swiftcalc; you would be better transferring the data to the spreadsheet and then using the Super Graphics module.

There are some spreadsheet type commands built in to allow totals etc to be calculated and all the records can be sorted in alphabetical, numeric or chronological order.

Finally, there is a label facility. This allows company addresses to be associated with items in the database, you list orders etc, and these can then be used to create labels for letters parcels and invoices. This also includes the calculation for use in the WP program. Overall, this is an adequate

# Get more from

## Part Two

# SUPERBASE

by  
Geoff  
Wheelwright

Last month we gave you a set of problem-solving answers compiled by Precision Software from their knowledge of the questions Superbase users most frequently ask.

Here's the second installment of tips, to let you get more from Superbase.

**?** Why can I not use 'copy-all' or a similar utility program to copy my database?

Superbase data is not stored like other disk files. In fact, it compacts all the data before it stores it on disk. Superbase also maintains its own 'record directory' on the disk. It is this directory that enables rapid access to any record in the file.

The reason 'copy all' does not copy correctly is that the directory is sensitive to the exact location on disk. That is, 'copy-all' copies the data but since it does not copy it to the same locations, the copy fails.

Superbase uses the method because it's fast. Using the Commodore operating system would be much slower. The supplied Utility program does not do a simple copy. It actually duplicates the database structure, then transfers the data into it.

**?** I made a change to my list format and now I can't read my data beyond a particular record. Is my disk corrupted? I've tried both Utility and Backup but to no avail. Are they faulty too?

The software is not faulty, but here's why you have a problem. When you changed the file format, the data did not get changed. Changing the format by adding a field at the end or deleting the last field is safe but if you add or delete a file in the middle, you change the field order. So your fields and the corresponding data are then mismatched.

There's three ways of fixing the problem. Firstly, if you've only just changed the format, change it back and delete all records stored since the change. If the file is small, change all the field types in the format to text, locate and amend the troublesome records and then change the field types back again. However, if the field is large, change all the field types to text, export the data, recreate the database and/or

file on another disk, then import the data.

If you take portions of the format and file status whenever you create or amend a file, fees will be easier to implement.

**?** I am having difficulty numbering pages in reports. Is there an easy way to do this?

Here is an elegant example that prints page numbers:

```
10 report "customers"
20 pn=f:pl=66:h=f:cm h is
  still title + footing lines
25 plan pl: tlen 60: rem 8: footing
  lines
30 title "CUSTOMER LIST" @60
  "PAGE:" @2, 0pn: cr:cr:
  "CUSTOMER" @20
  "BALANCE" @30
  "TELEPHONE" cr:
40 total: t=t+1: x=abs(t+1+
  (h*pn-pn)*t): pn=pn+x
50 detail all (name) @5, 2@20
  (balance) @30(telephone)
60 andreport
```

The key to this program is in line 40, the 'total' line. We take advantage of the 'total' command's ability to count lines automatically, and record the number of lines output with each record in the variable T1. Next, the variable x takes a value each time a record is output, either 0 or 1. This value is worked out as a test of the equality of two expressions.

The left hand expression evaluates a figure based on the line count, T1. The right hand side evaluates a figure based on the current page number, PN, times the page length in lines, PL. The first expression on the line increments the page number (call it Whenever X is 0, that is on all lines except the last, PN is incremented by 0, so it is unaffected).

But whenever the two are equal, which only occurs at the end of a page, the page number is incremented by one ready for the next page. The actual page number is of course printed as part of the 'title' line. It works, honest.

If you plan to use this routine, be sure you set up the initial variables correctly. The page number, PN is set to whatever you want, normally 1. The variable H holds the total number of lines printed in 'title' and the difference between the values for 'PLEN' and 'TLEN'. Finally, use a variable for 'PLEN': I have used P1, which reappears on line 40 as part of the key expression in the middle.

**?** What do I do when I get a 'disk full' message?

After the disk full error, the simplest solution is to start using the backup disk as the master. Also, make a backup of the backup before you start work.

In no circumstances should you do any kind of write operation on the disk that has produced the disk full error. If you have Superbase version 2, use the 'utility' program on the Superbase disk to recover and copy the database to a new disk. This also compresses it. You may lose the data that was being written when the disk full error occurred, unless you were already using Version 2.

If you have Superbase Version 1, life is not so easy. If there is any space on the disk after deleting keys, help files, etc., use the 'output' command to extract record data a little at a time using a series of key lists created with 'find'. For example, put "A7" as the criterion for the key field to extract all records whose keys begin with A.

After using 'output to', copy the data file to another disk with a non Superbase utility. If you have a dual drive — but not twin units — both the key lists and the data files may be created directly on the other drive. Copy the file definition(s) across too. Recreate the database, name the database files, modify each one with a dummy textfield at the end, and import the data.

Purchase of Superbase Version 2 is strongly recommended by Precision if you want to get the most from your data files.

## MAIL ORDER ADVERTISING

### British Code of Advertising Practice

Advertisements in this publication are required to conform to the British Code of Advertising Practice. In respect of mail order advertisements where money is paid in advance, the code requires advertisers to fulfil orders within 28 days, unless a longer delivery period is stated. Where goods are returned undamaged within seven days, the purchaser's money must be refunded. Please retain proof of postage/despatch, as this may be needed.

### Mail Order Protection Scheme

If you order goods from Mail Order advertisers in this magazine and pay by post in advance of delivery, Commodore User will consider you for compensation if the Advertiser should become insolvent or bankrupt, provided:

- (1) You have not received the goods or had your money returned, and
- (2) You write to the Publisher of Commodore User summarising this situation not earlier than 28 days from the day you sent your order and not later than two months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the Advertiser has been declared bankrupt or insolvent up to a limit of £10,000 per annum in respect of all insolvent Advertisers. Claims may be paid for higher amounts, or when the above procedure has not been complied with at the discretion of Commodore User, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of readers' difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payment made in response to catalogues etc, received as a result of answering such advertisements). Classified advertisements are excluded.

- 744 pages. Large 7" x 9" format. Plastic comb binding — easy to handle. Quality RSA product.
- Progresses in natural sequence from BASIC through machine language and hardware.
- 8 full authors include Fred Brown and Terry Ryan, designers of C128 software, Bill Reed and Dave Haynie, designers of C128 memory management and other hardware. Von Etzwe, customer of CPM for C128 and its disc drives, Kim Eckert, developer of 8663 80-column chip.

#### Topics include

- Basic 7 machine language, moving Basic with ML.
- Basic 7 commands for easier graphics, sprite sound, music programming.
- Input and output — all card devices including discs for 1201 printers in R632, modem, mouses etc.
- CPM commands — 6105 cells, 280 meg, various CPM disc formats.
- Hardware schematics, electrical specifications, characteristics, pin descriptions etc.
- Memory management, bank switching, configuration register, master interrupts, 80 of chip etc.

Price: £14.95

Comprehensive and readable teaching and reference book on the 64. Takes cover of the Commodore 64 manual leaves off. Much longer than most computer books — 624 pages. Demonstration programs available separately on disk and tape. Topics covered include: course in Basic how Basic works, understanding Basic machine language, graphics ROM, pulse, memory maps, graphics and sound, tape & disc.

"We've given this book ten out of ten"

— Softpro7 Commodore UK

# TOMMY'S TIPS

When it comes to answering your technical and programming queries, whether they're on the 64, 128, 16 or Plus/4, Tommy's your man. Go on, write to him: Tommy's Tips, Commodore User, 30-32 Farrington Lane, London EC1R 3AU.

## Slipped disk

● Please help. I have a Commodore 64 and 1541 disk drive and during the last few days I have had disk problems. When I have run the Disk Check Program I get error 73. According to the disk handbook this means that the disk has been formatted in a non-compatible format but they were formatted with my own hardware so how come the problem?  
*G.H. Greenway, Worcs.*

This sounds very much as though your disk head is out of alignment. This problem can cause several peculiar errors to be generated because the disk drive can no longer correctly read the information stored on the disk. If you can format a brand new disk and then read it correctly, but you can't read an older disk then this is almost certainly the problem.

One way of solving it is to buy one of the disk-head alignment utilities which allows you to reset the head yourself. The other way is to take it to your local Commodore dealer or send it to one of the repair organisations, but this could prove a little more expensive. Either way, don't continue to save programs or data on disks as you could destroy data already on them until the problem is sorted.

## Cartridges

● I have a program on a ROM cartridge that I can exit to Basic from by selecting the appropriate key from the menu.

As the cartridge was second hand it came with no instructions. I need to be able to recall the program without switching off (e.g. with a SYS command).

How can I find the memory location for this program to enable me to do so?  
*A. Foster, Southport.*

There are two ways you can restart the cartridge, depending on what you want to save in the memory. If you have only machine-code routines or POKED values which you want to keep you can use SYS 64738 which will warm start the computer and restart the cartridge. If you want to retain any Basic program (which might cause a clash with some cartridges) then try SYS 32768 which will go to the location holding the 'jump address' of the start of the cartridge code. Note that some cartridges check particular memory locations when they start up so that if they have been altered the program immediately crashes, in which case a restart will not be possible without turning off the computer.

## Spare chip

● I've had my C128 for a while now, and I'm very pleased with its performance, but I wondered if you could help me with two points.

Is there any way to switch in the Z 80 processor so I could use it from Basic, and secondly, how do I get 640 x 200 resolution, as I can only seem to get 320 x 200 maximum with the 'GRAPHIC 1,1' command. I'd be grateful if you could help.  
*T. Barrett, Andover.*

I regret that you cannot run Basic with the Z80 processor. The reason is that the built-in Basic interpreters are

designed purely for the 6510 and 6502 processors; they cannot generate the code needed for the Z80. You may be able to get a Basic compiler which will run under CP/M with your Basic program initially stored as a text file (if you have the 1570/71 drive), but the Basic program could not take advantage of the Z80's facilities such as sound and graphics etc.

The GRAPHIC commands only act on the 40-column screen, so the maximum resolution you can obtain is 320 x 200. The only way to obtain the 640 x 200 resolution is by using the 80-column screen in bit-mapped mode. In the same way that users of the 64 had to perform intricate calculations to draw on the bit-mapped screen, so you will have to do the same thing if you want the higher resolution; there are no BASIC 7.0 commands to allow access to this mode.

## List lock

● I am writing a program that enciphers and decipheres a certain code. It is designed to run on the 64. However, I have tried to disable the stop keys by using POKE 806,115. This did disable it — and the return key! I also attempted to change the Basic pointers (in direct mode) but this failed to restrain the listing. Could you please advise me on a good list lock?  
*R. Gormos, Worcester.*

The best way of preventing anyone seeing the code is to generate a worm start (reset) whenever anyone types LIST. This can be achieved by POKE 774, 226: POKE 775, 252. If you don't want to be quite so mean, the following will just ignore the LIST command. POKE 774, 131: POKE 775, 164. As for the STOP key, this is disabled together with the RESTORE key, by POKE 808, 54: POKE 809, 188. Note that as an alternative you can disable both together with POKE 808 234; this will result in LIST producing rubbish, although the program will still happily run.

## Transformer

● I have a Commodore 64 which I bought in Germany. I am now posted back to the UK and I was wondering if the transformer will work satisfactorily in the UK as it is

# TOMMY'S TIPS

rated at 220V without damaging anything?

If not would a 240V transformer operate satisfactorily on my computer, as I have noticed that the pin configuration on the DIN plug is slightly different?

Corporal C. Wike, BFPD 43.

You should not have a problem using a 220V transformer as the UK since most equipment these days is designed to work over a wide tolerance of mains voltage. The mains is seldom exactly 240V and the small increase in output voltage will be handled by the internal voltage regulators in the computer itself. However, there is a slight possibility that the transformer may already include a 'tap' for 240V input. If the computer is out of warranty then take the transformer casing off, if there is a spare contact on the input side the chances are it will be for 240V. Get a service engineer to check it for you if you are not sure what to do.

## Sprite mover

Please could you help me and tell me how to move sprites around from left to right on my C126. I have tried but I cannot seem to get it exactly right. Also when I save my home mode games on tape when I re-load them the sprites have turned back into their block shapes. I would be very grateful if you could help me.

N. Pallance, Essex.

I can't quite see what the difference is between moving right-to-left and left-to-right. The simplest way is to set up a vector (speed and/or direction) using MOVSPR. The following examples show how to move a sprite anywhere on the screen:

MOVSPR 2, -20, +7 — moves Sprite 3, 20 pixels left and 7 down.  
MOVSPR 4, 20, 220 — moves Sprite 4, 20 pixels at angle 220°  
MOVSPR 5, 270 = 15 — moves Sprite 5 at max speed at angle 270°

When you have defined your sprites you can save them using BSAVE from their normal storage locations. Then load them at the start of your program from BASIC using LOAD "filename", 1, 1. The second 1 forces the data to load back to the locations it came from, thus putting your sprite data back into the right place.

## Beep routine

I have written a programme with my 64 to cover all my needs in VAT accounting for my business, it works perfectly except for one small annoyance.

I have included a routine to check the accuracy of my entries of input invoices, it checks that the invoice total matches the sum of the goods + VAT entries and beeps if incorrect, so that I can make any corrections before filling to disk.

The problem is that it beeps on many occasions when the entry is correct.

Perhaps you could help? I include a copy of the offending routine, I have added the line to print (wrong) rather than include the beep routine.  
S. Madgwick, Sussex.

```
901 INPUT "(DOWN) INVOICE TOTAL £"; IT
920 INPUT "(DOWN) RATEABLE GOODS £"; GD
930 INPUT "(DOWN) ZERO RATED GOODS £"; ZR
940 INPUT "(DOWN) VAT AMOUNT £"; VA
```

950 TT=GD+ZR+VA:IFTT=ITTHENS 910  
960 PRINT "WRONG"  
970 GOTO 920

Your problem is due to 'floating-point inaccuracy' which basically means that if you arrive at the same floating point answer from different directions there is no guarantee that the actual values will be the same. This is because computers cannot store floating point values precisely, they are held to a 'best approximation' which depends on the number of bits being used to store them.

The ways round the problem are to convert to floating point only at the line in which you want to do the comparison, to check for an approximate comparison rather than exact equality or to compare integer values. To compare integers, change line 950 in your program as follows  
950 TT=INT ((GD+ZR+VA)\*100):IFTT=INT (IT\*100) THEN 910

This will silence your machine except for genuine errors!

## Digital display

I am the proud owner of a Plus4 and at the moment I am writing a simple game. I have one problem though. I'm trying to print a stopwatch, but I can't get a digit to print in the same place as the previous digit. I've tried a PRINT TAB statement but all I get is a list of digits. Could you please help me? Advice would be very much appreciated.  
S. Toytoc, Cumbria.

You can place a string or number at a given point on the screen very simply, using CHAR. However, if you are going to be overwriting a floating point number with another you will get problems when the position of the decimal point changes when you go from 1 to 2 digits before it and so on.

The best way of displaying numbers of any sort in these circumstances is to convert the number to a string and pad it with zeros or spaces so that the decimal point (or 'space' character) is always in the same place in the string. The following line of code places the string NUMS in row 6, column 10, NUMS. By placing this inside the loop that updates NUMS, you can have the effect of a changing clock, or changing anything, in the same screen position.

## Wrong address

I have a problem with my Commodore 64. Whenever I enter something like POKE 54296, 15 and then PEEK the same address a totally different number occurs. However, although different numbers occur when I peek the location, any programs such as a sound program works perfectly. I have worked out that this problem occurs from address 53266 to 65535.

I wondered if using a wire to reset the computer would be the cause of the problem. I would appreciate your views and any advice you could possibly give.  
P. Gunning, Eastbourne.

You don't actually have a problem, since some of the registers in this area are 'write only'. You can alter the contents of these registers, but cannot read them, the result of a PEEK will often be zero. This is not true of all the addresses however, since some of them, such as 56520 and 56521 return the values of the joystick switches and the FIRE buttons. Therefore, some of the addresses in this area will allow you to change them, but not read, while others can be read, but not changed (at least, not by POKE). Using a 'wire' reset, by which I assume you mean grounding the 'reset' line on either the User-port or the serial port, does not have any effect on whatever you can PEEK or POKE on address.

# Hot on holiday shots

By  
Mike Patenden

Oh, the sun has got his hat on, lup, lup, lup etc, I'm off on holiday on the proceeds of all those bribes from Elie, Ocean and US Gold. So just to get me in the mood here's a Holiday Hotshots for you. Grab yourself a Singapore Sling from the top and sit yourself down under the muckshade, I wanna tell you a story...

● The question, the burning question I should say is where's everybody going for their summer hole in the ill gotten gains of their full priced games this year?

It's a well-known fact that if you've got money and you aspire to status than you've got to have a car and an expensive holiday. The best as you should all know by now is a Porsche. A Porsche because they're fast and classy. Someone accused me recently in the letters page of being a Porsche fanatic which is totally wrong. I'm a Ferrari Daytona or GTO man. Throw in an Aston Martin as a reward, I'm happy.

Anyway where are the wealthy software dross heading this summer, Miami? the Caribbean? Well I'm disappointed at the lack of exotic locations actually. The best one I've heard of so far is Domark. Where would you expect them to go? A week in the London Dungeon maybe, or perhaps it might be the sexdens of Bangkok? No, Mark Strachan told me, after much debate on the other end of the line ("Quick Mark, where are we going, what's right for our image?") The line clears and a voice tells me "Yes Mike, just checking the duty there, I'm going to Castile

Strachan in Scotland, that's a little cede I own near Loch Garry, and Domark's off to his Villa in the south of France. Sure lads and I'm off for a cruise in the Space Shuttle.

● And where is the Games Man going that frustrated populist of the software world Geoff Brown, lord of all US Gold products? Well it seems he's worked a bit of a loosebie. He's off to the south of France with his Lieutenant Tim Chaney and a French distributor Albert de London of Macromania. Money comes to money eh...?

● Now, most importantly, where are the richest software houses of the lot going? I mean Ocean of course and in particular David 'God' Ward, the god-father of gaming. His lieutenant, Paul Funnegay, tried to convince me that the three of them (John 'the Fridge' Woods being the other macdennas) were going to a caravan in Telukka? North Wales. This is the kind of place hard-up Scousers go — it's a sort of joke. Naturally I wasn't swallowing that one. After some severe cross questioning I managed to elicit that

'God' was off to Italy (Sicily?) for a few weeks, John was off to the South of France and Paul had just come back from Rhodes (110° in the shade, curiously).

● And what of the young pretenders? The man who comes reeking to mind here is Thrifty Steve Wilcock Elie's boss. The man who works seven days a week, 360 odd days a year without a lunchbreak is going to Greece with some mates. Mind you, his dad Brian, the other half of Elie ordered him to take it...

● What of the programmers? Some of these guys do all right out of their games. Well Jeff Minter's off to Corsica with the lumpy convoy. Sorry that's a lie, he's going with a few mates. I asked Andrew Brynbrook where he was going fully expecting him to be off to the Algarve or somewhere exotic on the royalties of Urduidun. Not at all! He can't bear to be away from his computers for any length of time. "I might take a break down the arcades for a couple of days, but that's it." What a boring chap.

● Mark Cole, System 3's youthful supremo (hob) won't be going anywhere. He's just come back from the CES show in Chicago. The reason I know this is because he was quibbled there by a photoblogophile. No, don't go away there's a mouse, sit down, have

another drink. Mark was spotted in a queue at the show. See the CES show, apart from being the place to show off your software is also the premier spot to exhibit the up and coming porn movies. Stars of such celluloid masterpieces often turn up to the show to give autographed pictures away. Guess which queue Mark was in? Got it in one, told you it was worth waiting for...

● Whilst we're talking gross let's just give you an update on poor Shyne Sigus Sputnik. The band are currently quaking in their high heels because their single took a nose-dive after two weeks. The computer game I mentioned to you last month is due to appear sometime, but only after much hard work by the PR team. Two such wacky types turned up at Domark all suited up, hair up to the rafters you know the kind of thing demanding £80,000 for the rights to the game. They were sent packing (surprising) and had several more fruitless journeys before they finally secured a major deal. Sorry but I'm still not interested in the exclusive.

● Now for a good 'un. My old country and western pickie's pal Fergus from Probe was at the centre of a shoot out last week. Well actually he was playing around with a toy gun in a London pub when someone spotted him and phoned the police. A dozen heavily armed constables came crashing through the door ten minutes later only to find an embarrassed Fergus shouting "I've done my tax this year, I've done my tax this year"...

● Finally I want you to try and guess which two software companies have still not coughed up the money for their Off the Hook Champagne, supposedly donated some six months ago. Answers on a postcard please or another fat payoff from the people concerned or it goes in next month...

● Well, I'm going for a dip now, comming... ☐

## THE GRAPHIC ADVENTURE CREATOR

The amazing, combined text and graphics adventure generator enables you to produce fast, compact adventure games with the minimum of effort and the maximum of creativity. Stunning graphics can be created quickly and easily with the powerful picture generator that has many features including:-- dot, circle, elasticline, ellipse, fast fill, shading, step by step review, easy editing and the ability to merge pictures.

The comprehensive, intelligent command interpreter can handle complex sentences and multiple input commands. There is also an extensive text compression facility that allows you to produce far more detailed and numerous location descriptions. Plus a full function editor, automatic word formatting, a logical command interpreter and an abbreviated input acceptance facility.

So unleash the power of your imagination now with The Graphic Adventure Creator, for your Commodore 64 computer. Available from all leading retailers or direct from Incentive on 0734 591678.
